

SUPPLEMENTAL MATERIAL

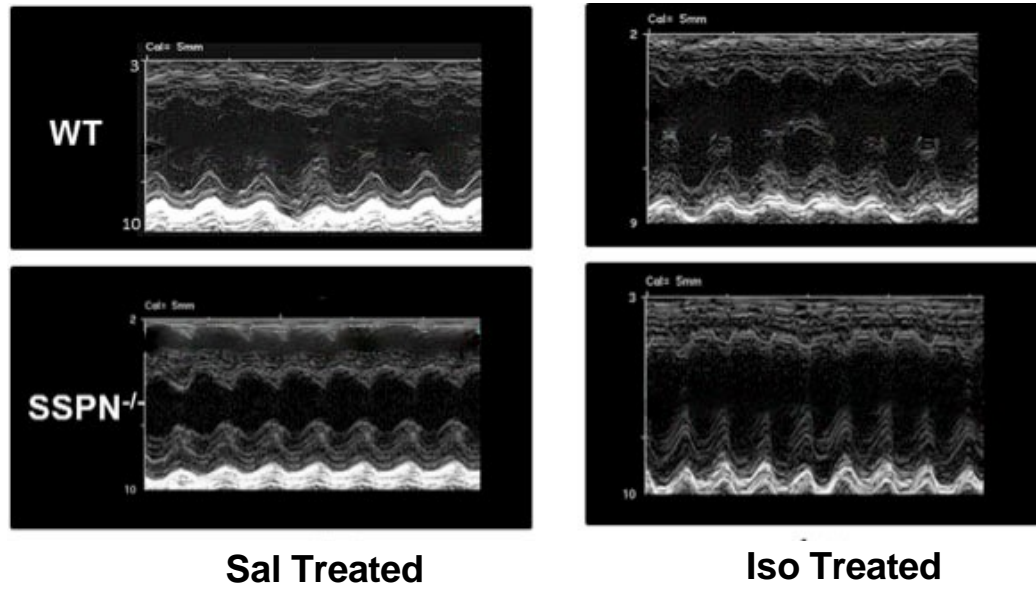

Figure S1. M-mode images of isoproterenol-treated SSPN-null hearts. The representative M-mode images show WT (top) and SSPN^{-/-} (bottom) mice after β -agonist treatment.

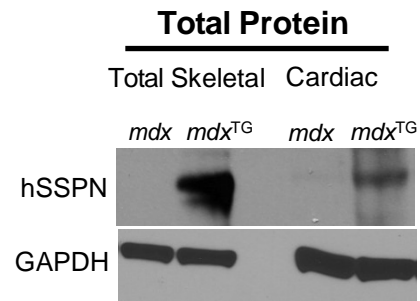

Figure S2. Expression levels of the SSPN transgene in *mdx* mice. Total protein samples obtained from total skeletal and cardiac muscle were immunoblotted to determine expression levels of the human SSPN transgene in both tissue types of *mdx* and *mdx*^{TG} mice. GAPDH was included as a loading control.
