

**Figure S5: Affinity PAGE with glycans that are not recognized by SGBP-A and SGBP-B.** Affinity electrophoresis (10% acrylamide, native and 0.1% XyG) of SGBP-A and SGBP-B full length (34-489) and truncated proteins expressing domain A (34-133), domain B (134-229), or domains CD (230-489). BSA was included as a control protein.
