

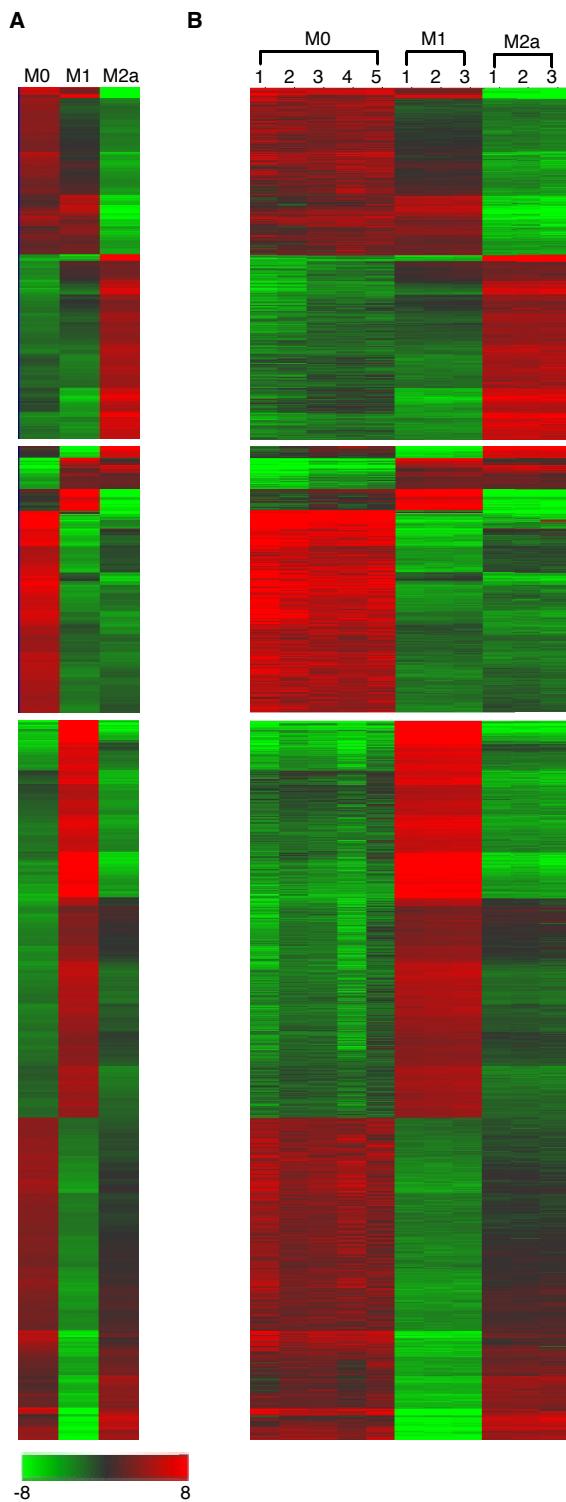

**Figure S1. Signs of colitis develop in *Rag1<sup>-/-</sup>* C57BL/6 and *Rag1<sup>-/-</sup>* BALB/c Mice after transfer of naïve T cells.** (A) Curve fit analysis of the weight change over time after colitis induction (*Rag1<sup>-/-</sup>* C57BL/6, n= 19 and *Rag1<sup>-/-</sup>* BALB/c n=22). (B) Colitis scores from mice at days 10 (n=3 for both), 20 (n=3 for both), 30 (n=5 for both) and 40 (n=4 for *Rag1<sup>-/-</sup>* C57BL/6 and n=7 for *Rag1<sup>-/-</sup>* BALB/c). (C) Representative H&E stained colon sections from mice in B. (D) Representative flow cytometry analysis of IL-17A and IFN- $\gamma$  expression. Numbers in quadrants are averages. (E-F) Frequency (E) and number (F) of CD4<sup>+</sup> T cells producing IFN- $\gamma$  in SP and MLN. (G-H) Frequency (G) and (H) number of CD4<sup>+</sup>IFN- $\gamma$ <sup>+</sup>IL-17A<sup>+</sup> T cells in SP and MLN. (I-J) Frequency (I) and number (J) of CD4<sup>+</sup>IFN- $\gamma$ <sup>+</sup> T cells in SI and colon lamina propria. (K-L) Frequency (K) and number (L) of CD4<sup>+</sup>IFN- $\gamma$ <sup>+</sup>IL-17A<sup>+</sup> T cells in SI and colon lamina propria. (M) Frequency of MLN iTreg cells expressing Ki-67 and Bcl-2. Each symbol represents an individual mouse, and small horizontal lines represent the mean. \*p< 0.05, \*\*p< 0.005, \*\*\*p<0.0005 and ns, not significant; Mann- Whitney test or t-test.

**Figure S2. Gene expression profiles of macrophage subsets.** (A) Heat map generated by comparing the average gene expression for each macrophage subset to the average of all experiments ( $n=11$ ) as the common standard mean. The probe sets shown are those that revealed a twofold or greater difference in expression ( $|\log_2 \text{ratio}| > 1.0$ ) and rank product FDR <10% relative to M0 cells (Figure 3). (B) Heat map comparing each individual gene array to the common standard mean.
