

S2 Fig. Fitness measures of adult *P. pequodorum* emerging from susceptible (AS3) and resistant (CJ113) aphid lines. Dry weight, $p = 0.2061_{\text{♀}} / 0.0687_{\text{♂}}$. Tibial length, $p = 0.1431_{\text{♀}} / 0.0015_{\text{♂}}$ (ANOVA). Letters indicate significance among females (capital letters) and among males (lowercase letters) (Tukey's HSD $\alpha = 0.05$). Note: Error bars are for dry weight only.
