

Supplemental Data

Chemical Inhibition of a Subset
of *Arabidopsis Thaliana* GSK3-like Kinases

Activates Brassinosteroid Signaling

Bert De Rybel, Dominique Audenaert, Grégory Vert, Wilfried Rozhon, Juliane Mayerhofer, Frank Peelman, Silvie Coutuer, Tinneke Denayer, Leentje Jansen, Long Nguyen, Isabelle Vanhoutte, Gerrit T.S. Beemster, Kris Vleminckx, Claudia Jonak, Joanne Chory, Dirk Inzé, Eugenia Russinova, and Tom Beckman

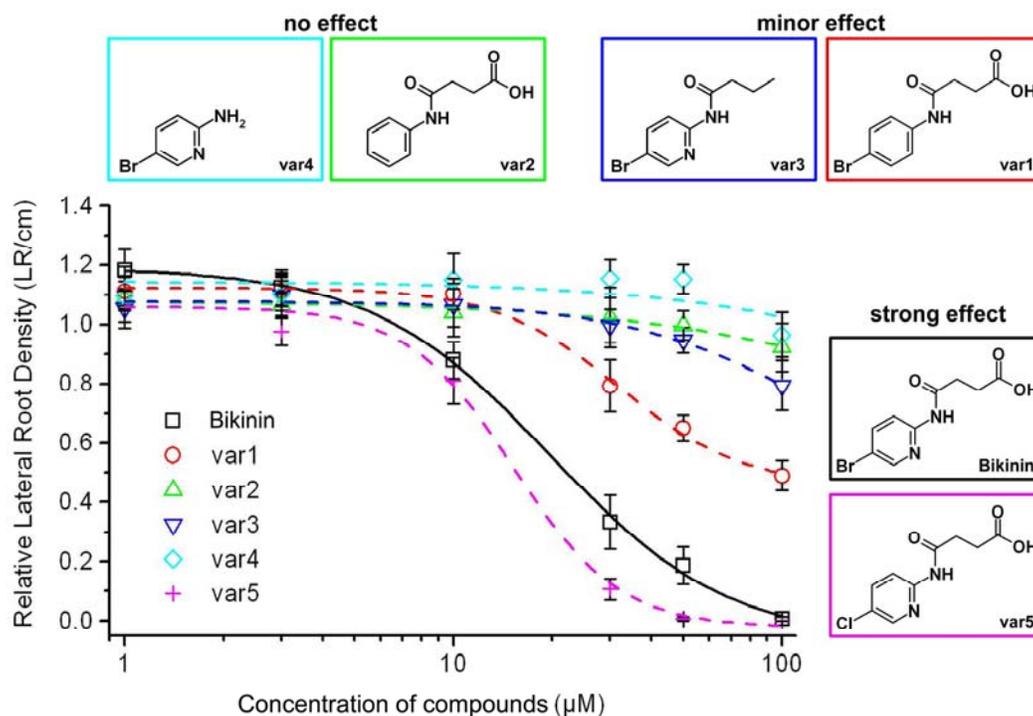

Figure S1. Decrease of Lateral Root Density by Bikinin and Its Variants

Dose-response analysis of bikinin and its derivate structures. Three days after germination, seedlings were transferred to medium containing bikinin or DMSO and grown for an additional seven days. Lateral root density (number of lateral roots/cm) of compound-treated plants was compared to DMSO-treated plants (relative lateral root density). All results are means \pm s.e. ($n \geq 10$ for each data point) and experiments were repeated at least twice.

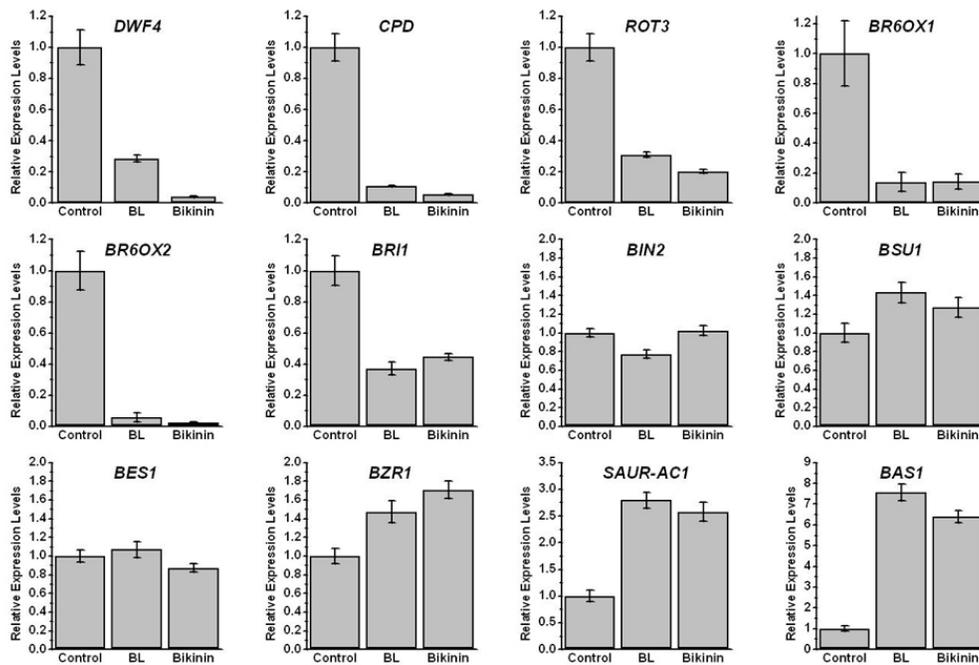

Figure S2. Transcriptional Regulation of the BR Pathway by Bikinin and BL
 Quantitative RT-PCR experiment measuring the relative expression levels of five BR-biosynthetic genes (*DWF4*, *CPD*, *ROT3*, *BR6OX1*, and *BR6OX2*), five BR-regulated genes (*BRI1*, *BIN2*, *BSU1*, *BES1*, and *BZR1*), and two BR-upregulated genes (*SAUR-AC1* and *BAS1*) on 3-day-old seedlings after treatment with BL (1 μM) or bikinin (30 μM) for 6 h compared to DMSO-treated controls. All results are means ± s.d. Individual reactions were done in triplicate and experiments were repeated at least twice.

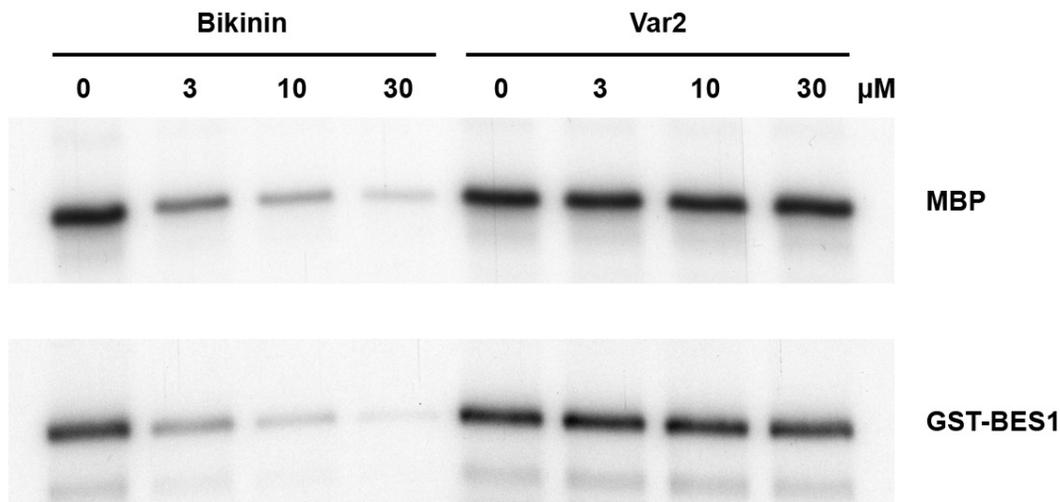

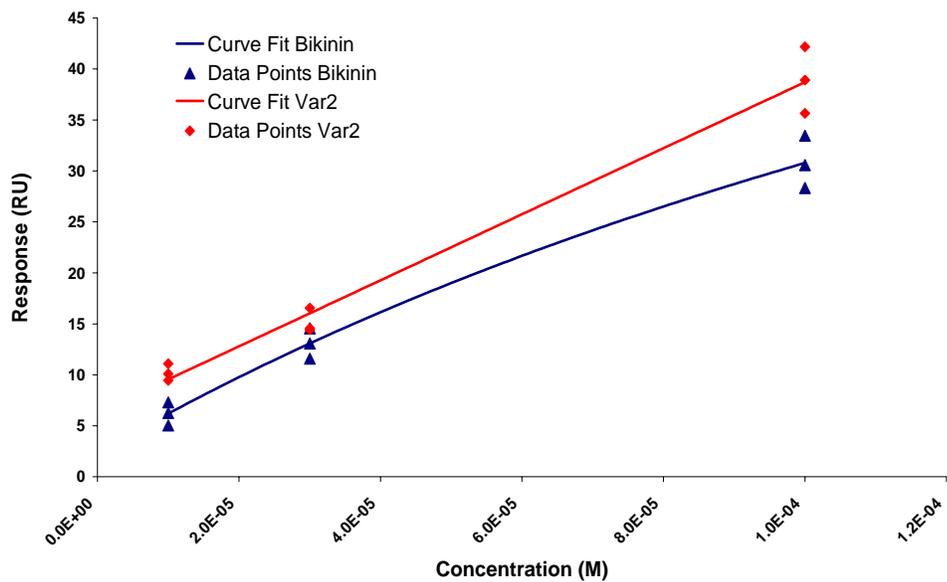

Figure S3. Autoradiography of a Kinase Assay with GST-BIN2
 A concentration gradient of Bikinin or the inactive variant 2 were assayed and either MBP or GST-BES1 was used as a substrate.

	KD (M)	Rmax (RU)	offset (RU)	Chi² (RU²)
Bikinin	2.41E-04	97.1	2.3	3.37
Var2	4.899	1587401.3	6.3	4.83

Figure S4. Affinity Curves for Bikinin and var2 (Top) and Calculated Affinity Parameters for Both Compounds (Bottom)

Reference and blank data are subtracted. The experiment was done in triplicate for each concentration.

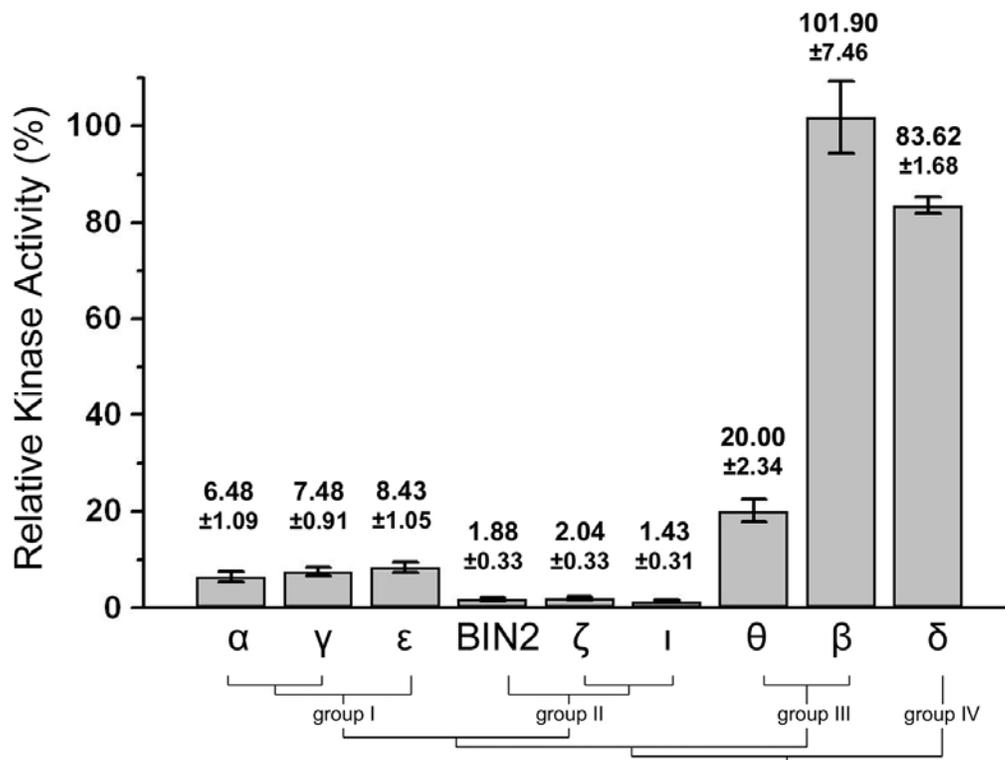

Figure S5. Quantification of the Inhibitory Effect of 10 μ M Bikinin on ASK Activity

The activity without bikinin was set to 100% for each kinase. All results are represented as means \pm s.d. Experiments were repeated four times.

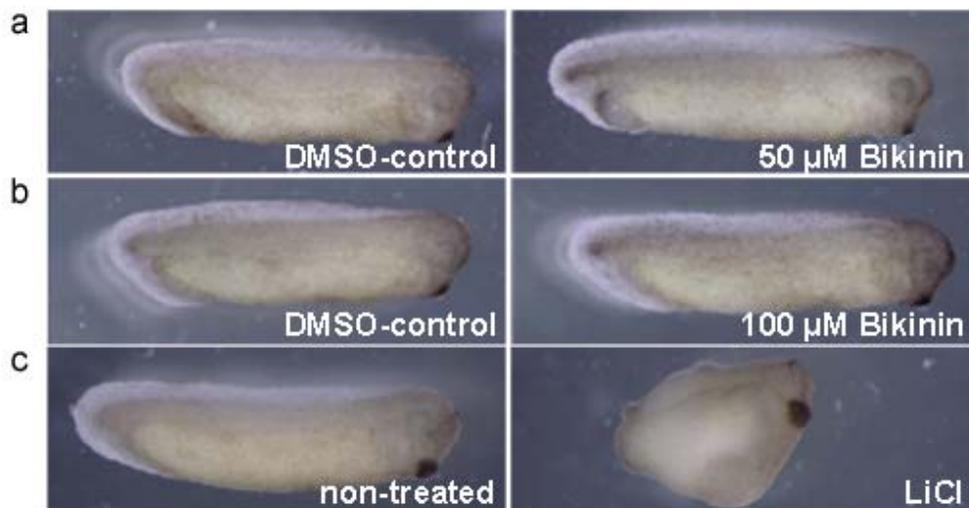

Figure S6. In Vivo Effect of Bikinin on *Xenopus laevis* Embryos

Early blastula embryos (\pm 32-cell stage) of *Xenopus* were treated for 24 h with 50 μ M or 100 μ M bikinin (A and B) in 0.1x Marc's modified Ringer's (MMR) solution (0.01 M NaCl; 0.18 mM KCl; 0.2 mM CaCl₂; 0.1 mM MgCl₂; 0.5 mM HEPES, pH 7.6) and those treated with DMSO were used as negative controls (A and B). As a standard test to induce dorsalization, early blastula embryos were treated with 0.3 M LiCl for 10 min (C). Embryos were washed several times with 0.1x MMR and photographed 48 hr later.

SI - Table 1. In vitro effect of 1 μ M bikinin and 10 μ M bikinin on the remaining activity of 77 human kinases (means \pm s.d.; experiments were performed in triplicate)

Tested Kinase name	residual activity when treated with 1 μ M bikinin		residual activity when treated with 10 μ M bikinin

SI - Table 4A Fold-change of BIK and BL regulated genes.

The comparisons from left-to-right are: BIK- vs. mock-treated 0.5h; BL- vs. mock-treated 0.5h; BIK- vs. mock-treated 2h; BL- vs. mock-treated 2h

**COMMON DOWNREGULATED GENES
