Supplementary Figure 1 Goodness of fit plots for the efavirenz pharmacokinetic model (n=606 patients) illustrating (**a**) population predictions of efavirenz *vs.* observed concentrations and (**b**) individual predictions of efavirenz *vs.* observed concentrations for the base model, (**c**) population predictions *vs.* observed concentrations and (**d**) individual predictions *vs.* observed concentrations for the final model. The fine line describes the line of unity and the bold line describes the line of regression.
