

1 Supplemental Figure 10

2

3 Supplemental Figure 10. Experimental verification of pCTGs by qRT-PCR and
4 ChIP

5 (A) Expression levels of the reported CLF-regulated genes in *clf-28* and WT seedlings
6 detected by qRT-PCR. FLM served as a negative control of CLF regulation. Error bar
7 represents standard error (n=3). (B) Histone modification levels on *AG* and *HAI2* in
8 seedlings determined by ChIP-PCR. Error bar represents standard error (n=3).
