

1 **Supplemental Figure 11**

2

3 **Supplemental Figure 11. Expression specificities of the genes controlling cell size in**  
 4 **embryos**

5 Expression levels were measured by normalized microarray signal intensities. X-axis  
 6 gives the name of samples obtained by micro-dissection. Each set of biological replicates  
 7 was shown by a two-way arrow. Developmental stages were marked by different colors  
 8 on the bottom of the figure.
