

1 **Supplemental Figure 13**

2

3 **Supplemental Figure 13. Expression specificities of the genes controlling fatty acid**
 4 **biosynthesis in embryos**

5 Expression levels were measured by normalized microarray signal intensities. X-axis
 6 gives the name of samples obtained by micro-dissection. Each set of biological replicates
 7 was shown by a two-way arrow. Developmental stages were marked by different colors
 8 at the bottom of figure.
