

1 Supplemental Figure 3

2

3 Supplemental Figure 3. Gene clusters with enriched CRGs are preferentially
4 expressed at the mature-green stage

5 The ratio between CRG number and total gene number in a cluster is given. Expression
6 levels (normalized FPKMs) of genes at stage-1 were used as the reference to calculate
7 relative expression levels. Red and cyan lines show CRG and other genes, respectively.
8 Blue line gives mean values of relative expression levels.
