

Table 1 Summary of the effects on lifespan, healthspan, and potential side effects of the pharmacological geroprotector candidates, ordered on the base of evolutionary conservation of lifespan effects in different models

Geroprotector Candidate	Primary selection criteria												Affects aging-associated diseases						
	Reproducibility of anti-aging effect in different models				Amelioration of human aging biomarkers				Low toxicity	Low risk side effects	Quality of life. Improvement of functioning								
	Yeast	Worm	Flies	Rodents	Anti Amyloid	Anti Inflammation	Anti hyperglycemia	Antioxidation	Improves Lipid Profile	Neuroprotection	Improve Cutaneous Aging	Physical	Mental	Emotional	Anti Cancer	Anti Atherogenic	Anti Diabetic	Anti Cardiovascular	Alzheimer Disease
Acarbose				+		+	+		+			+	+	+			+	+	
Deprenyl				+					+			+	+			+	+		
D-glucosamine	+			+		+				+		+	+	+		+	+		
Dihydroergocristine methanesulfonate	+									+		+	+						
Ellagic acid	+				+	+				+	+	+	+			+	+	+	+
Glutathione	+						+					+	+						
Metformin	+	0	+	+		+	+		+	+		+	+	+	+	+	+	+	+
Rapamycin	+	+	+	+	+	+				+		+	-		+	+	+	+	+
Spermidine	+	+	+				+					+	+						+
Tyrosol		+					+					+	+	+					+
Vinpocetine	+								+			+	+		+				+

[+] - positive effect; [-] - negative effect; [0] - no effect; empty cell - no data available
