

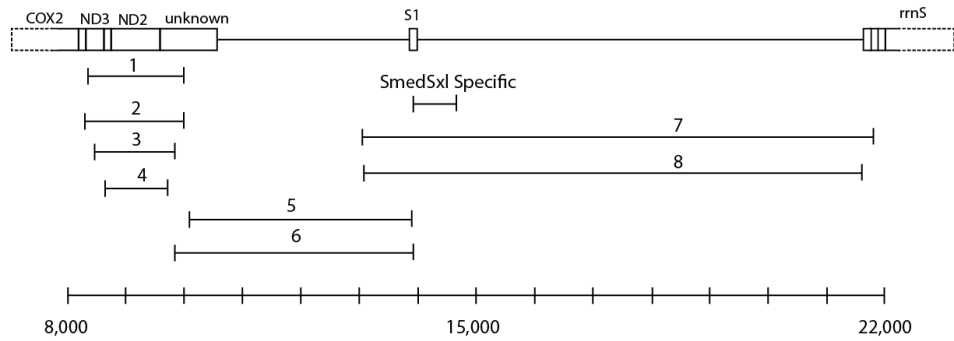

Figure S5 – Schematic of PCR and sequencing of key regions of the *S. mediterranea* mitochondrial genome.

A. SmedAsxl - Amplification Products

B. SmedSxl - Amplification Products

Non coding regions with surrounding genes for each *S. mediterranea* biotype. Numbered bars represent amplification primer locations and expected products. These numbers correspond to the numbers in Figure S6 and table S5. tRNA names are not show except for "S1". See Figures 1 and 2 for full gene complement and tRNA names.
