Supplementary data

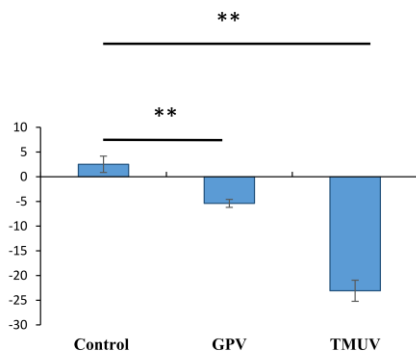

Figure. S1. The average weight change of goose groups at 5 days post infection by TMUV and GPV, respectively. Bars marked by one star (*) presented a significant difference at $P < 0.05$; bars marked by two stars (**) presented a significant difference at $P < 0.01$.

Figure. S2. Histological changes in the brain (B), liver (LI), lungs (LU), spleen (SP), and small intestine (SI) of geese infected with TMUV and GPV. The histological sections were stained with haematoxylin and eosin. Brain (A, F), liver (B, G), lungs (C, H), spleen (D, I), small intestine (E, J).
