

S3 Fig. Muscle histology with LWA300.

A-B. LWA300 signal in tibialis anterior muscles. Images show muscle cryosections after incubation with LWA300 (A) or LWA300 after Epox pre-incubation (B). **C.** EGFP signal in transduced muscle section prior to washings. **D.** EGFP signal after PBS, EDTA and methanol:PBS (1:1) washings. DAPI counterstains the nuclei.
