Supplemental Figure Legend:

Supplemental Figure 1. Control experiments for Figure 1C. (A) Experiments were performed in parallel with the experiments in figure 1C using primary T cells, NK cells from C57BL/6 mice or macrophages from TLR4 deficient mice. IL-15 products were generated by RT-PCR. (B) Actin controls for 1. NK cells, 2. T cells, 3. Macrophages, and 4. RAW246.7 cells.
