Pseudo- R^2	.0649				.0844			
<i>n</i>	298931				336055			

Notes: These models are similar to those presented in Table 2 in the main article, except that they include domestic migration for work and for other reasons as alternatives to international migration. Standard errors are adjusted for within-household clustering using a Huber/White estimator.

* $p < .05$; ** $p < .01$ (two-tailed tests)
