

**Supplementary Figure 3:** Chemokines responses of *L. major* infected WT and CatB<sup>-/-</sup> mice.

WT and CatB<sup>-/-</sup> were inoculated subcutaneously in the footpads with  $3 \times 10^6$  stationary phase promastigotes of *L. major*. Footpads were harvested at day 21 and 28 post infection. Levels of CXCL1 (A), CCL2 (B) and CCL5 (C) were measured in the supernatants of footpads by ELISA.
