

Supplemental Figure 4

**A**

**B**

**C**

**Supplemental Figure 4.** PCR confirmation for expression of selected MLL1 target genes. **A-C.** Three groups of genes were selected for real-time PCR confirmation based on similar responses to inhibitors against MLL1, DOT1L, MENIN and BRD4 (A) or against MLL1, DOT1L and MENIN (B) or against DOT1L/MENIN only (C). Gene expression was normalized against *Gapdh* and presented as fold changes. The expression in DMSO control was arbitrarily set as 1. Average results from three independent experiments are shown. Error bars represent standard deviation. Student *t*-test were performed for statistical analyses, \*  $p < 0.05$ , \*\*  $p < 0.01$ .
