Figure S8

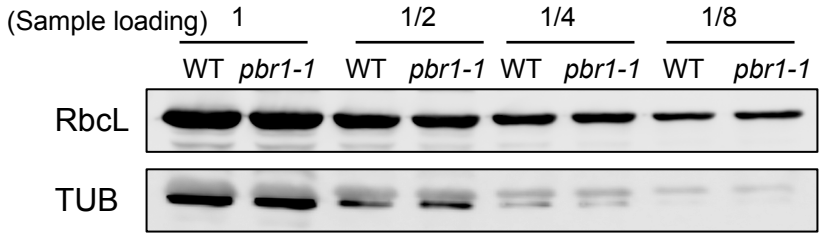

Figure S8 Effects of *PBR1* knockdown on the protein levels of RbcL. The protein levels of RbcL in leaves of the wild-type and *pbr1-1* mutant plants analyzed by western blots with an polyclonal antibody against RbcL. From left to right, the lanes of the upper blot show the undiluted wild-type (WT) and *pbr1-1* mutant protein samples (10 μg) and dilutions to 50, 25, 12.5 % of the WT and *pbr1-1* samples. Equal protein loading was confirmed with antiserum against α-Tubulin (TUB).
