

The mitochondrial genetic landscape in neuroblastoma from tumor initiation to relapse

Supplementary Materials

Supplementary Figure S1: Concomitant increase of tumor-specific variants in the nuclear and mt genomes from primary to relapsed NB. (A) Increase in tumor-specific variants in both the nuclear and the mt genomes of paired primary and relapsed NB at relapse. Shown are the number of tumor-specific variants in the nuclear (black) and mt (red) genome that changed in the relapsed tumor compared to the primary tumor of each patient. Spearman's rank correlation test resulted in a r -value of 0.0607 and a p -value of 0.8232. (B) Concordant increment of tumor-specific variants in both genomes at relapse. Concordance between the nuclear and mt changes in tumor-specific variants from primary tumors to relapse tumors was evaluated using Fisher's exact test, resulting in a p -value of 0.1012. Patients without increase include patients with decreasing and unchanging variants.

^aVariant position and substitution: Gene or region in the mitochondrial genome, variant position in the mitochondrial genome, base and amino acid substitution. Previously unpublished variants according to MITOMAP are marked with an asterisk (*). ATP6/8, ATP synthase subunit 6 and 8; COX1, COX2 and COX3 cytochrome c oxidase subunit 1, 2 and 3; CYTB, cytochrome b; D-Loop, displacement loop; HV3, hypervariable region 3; nc, non coding; ND1-6, mt encoded NADH dehydrogenase 1-6; tRNAGlu, tRNAHis, tRNALeu2 and tRNAThr, tRNA Glutamin, Histidine, Leucine 2 and Threonine; 12sRNA and 16sRNA, 12s and 16s ribosomal RNA.

^bPercentage of mitochondrial allele frequency. P, primary tumor; R1–R5: first to fifth relapse; < 1, allele frequency below the threshold set at 1%.

Supplementary Table S3: Recurrent tumor-specific mt variants

D-Loop	16519	C	>	T	nc	0	4	< 1	3.5

^aVariant position and substitution: Gene or region in the mitochondrial genome, variant position in the mitochondrial genome, base and amino acid substitution. COX1, cytochrome c oxidase subunit 1; CYTB, cytochrome b; D-Loop, displacement loop; nc, non coding; ND4-6, mt encoded NADH dehydrogenase 4–6; tRNAHis, tRNA Histidine; 16sRNA, 16s ribosomal RNA.

^bPercentage of mitochondrial allele frequency. P, primary tumor; R, relapse tumor; < 1, allele frequency below the threshold set at 1%.
