TSP=trans-species polymorphism

Other=Other polymorphic amino acid residues (in one or both species)

Chr=chromosome

Coordinates=chromosome coordinates from FlyBase release 6 (FB2015\_05) for *D. melanogaster*; +/- represent strand

**Table S2.** Weighted mean and standard deviation (SD) of synonymous divergence in the genes used for TSP analysis for each species pair.

<b>Species 1</b>	<b>Species 2</b>	<b>Mean</b>	<b>SD</b>
<i>D. melanogaster</i>	<i>D. simulans</i>	0.144	0.058
<i>D. melanogaster</i>	<i>D. yakuba</i>	0.332	0.091
<i>D. melanogaster</i>	<i>D. mauritiana</i>	0.147	0.052
<i>D. simulans</i>	<i>D. Yakuba</i>	0.301	0.099
<i>D. simulans</i>	<i>D. mauritiana</i>	0.053	0.045
<i>D. Yakuba</i>	<i>D. mauritiana</i>	0.308	0.091

**Table S3.** Nonsynonymous polymorphism and divergence in *D. simulans* AMPs from Begun *et al.* 2007.

Chromosome positions refer to release 6 (FB2015\_05) in *D. melanogaster*.

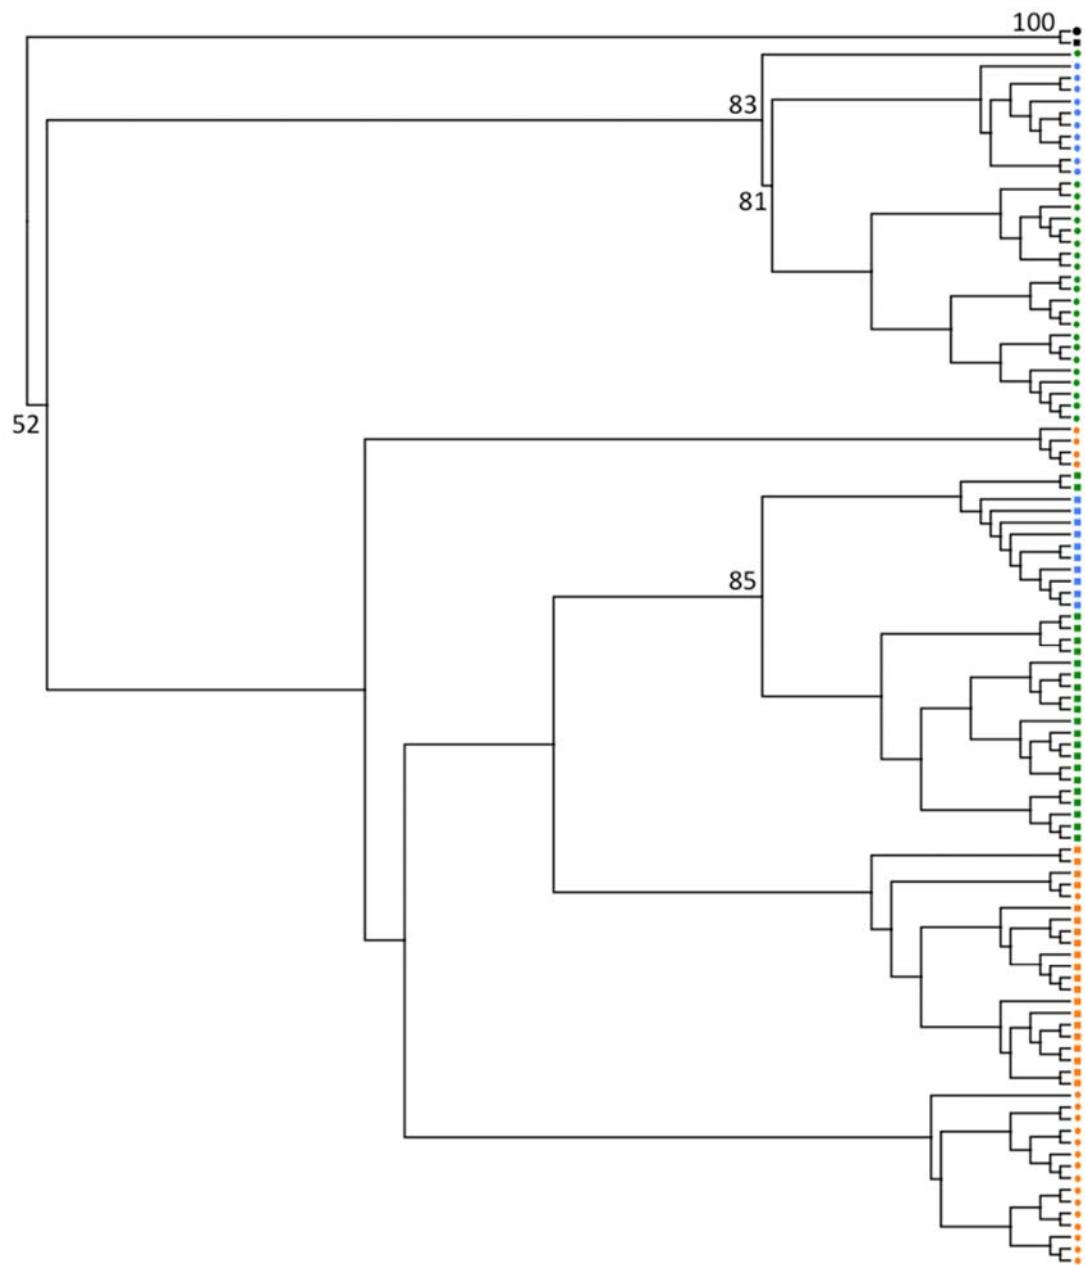

**Table S4.** Trans-species polymorphisms in control genes. Reported as PA<sub>1</sub>A<sub>2</sub> where P is position in alignment, A<sub>1</sub> and A<sub>2</sub> are the two amino acid alleles. ND – no comparison due to poor alignments.

**Table S5.** Trans-species polymorphisms (TSPs) summed across all genes for AMPs and a control set. P-values assessed using logistic regression (see methods). P-value for total significance based on Fisher's method for combining P-values.

Contrast	AMP TSPs	Control TSPs	P-value
<i>D. melanogaster/D. simulans</i>	9/1459	2/1771	<b>0.012</b>

<b>Total</b>	<b>32/7338=0.004</b>	<b>14/10626=0.001</b>	<b>0.055</b>

**Figure S1.** Bootstrapped Neighbor-Joining tree of *Drosophila Attacin A* (circles) and *Attacin B* (squares) sequences. Colors represent: black=*D. yakuba*, green=*D. simulans*, blue=*D. mauritiana* and orange=*D. melanogaster*. Node labels are bootstrap values for nodes with better than 50% bootstrap support.

**Figure S2.** Convergence of TSPs on the *Drosophila* phylogeny. Letters represent amino acids at the position along the top row (indicated for each gene – see Table 1). We considered polymorphism data for *D. mauritiana*, *D. simulans*, *D. mauritiana* and *D. yakuba*. Segregating amino acids are indicated by consecutive numbers. Amino acids in close paralogs are separated by a slash. Dashes represent data unavailable due to poor alignments or lack of sequence. Colours are used to visually differentiate alleles.
