

Supplementary Table 2. Odd ratios of hypertension associated with doubling (100% increase in) high sensitivity C-reactive protein levels in CARDIA women at year 25

	<b>Odd ratios</b>	<b>95% CI</b>	<b>p-value</b>
<b>Model 1</b>	1.43	1.35 - 1.52	<0.001
<b>Model 2</b>	1.32	1.24 - 1.41	<0.001
<b>Model 3</b>	1.28	1.20 - 1.37	<0.001
<b>Model 4</b>	1.26	1.18 - 1.36	<0.001
<b>Model 5</b>	1.14	1.05 - 1.24	0.002
<b>Model 6</b>	1.14	1.05 - 1.24	0.002

Model 1: Unadjusted analysis

Model 2: Model 1 adjusted for age and race

Model 3: Model 2 plus years of schooling, smoking, physical activity, alcohol use and center

Model 4: Model 3 plus total cholesterol, high density lipoprotein-cholesterol, diabetes, cholesterol lowering medication use and parity

Model 5: Model 4 plus body mass index

Model 6: Model 5 plus menopausal stage

Hs-CRP was measured in microgram/ml.
