\* Physically-linked genes are shown in bold face.

<sup>1</sup> Magnaporthales comprise three major clades (i.e., clades A, B and C). This column indicates which clades were involved in the gene transfer with *Colletotrichum*.

<sup>2</sup> The putative donor of the gene transfers between Magnaporthales and *Colletotrichum*.

<sup>3</sup> If one or more transferred *Colletotrichum* genes are located in long contigs (encoding  $\geq 5$  genes), value (1) is assigned. Value (0) is assigned otherwise.

<sup>4</sup> Number of *Colletotrichum* species involved in the individual HGT instance.
