%, 12-month prevalence; OR, odds ratio; CI, confidence interval; SES, socioeconomic status.

^a adjusted for age, age², migration background, municipality size class, residential region.

^b model 1 plus adjustment for health status (self-rated health, chronic illness, global activity limitations, injury/poisoning, diabetes, coronary heart disease, osteoarthritis, arthritis, cancer, depression, anxiety disorder, asthma, allergic rhinitis, atopic eczema).

^c model 2 plus adjustment for type of health insurance (statutory, private, other).

^d model 3 plus adjustment for the regional density of outpatient care (number of family practitioners, specialists, and psychotherapists per 100,000 inhabitants of the district).

^e incl. psychological psychotherapy.
