

A**B**

Supplementary Figure 1. BET inhibitors administration decreases proliferation of anaplastic thyroid carcinoma cell lines. Panels A and B; FRO and SW1736 were exposed to I-BET151 different doses (ranging from 50 nM to 10 μ M). Cell viability was determined by MTT assay after 0, 24, 48 and 72 h and expressed as a percentage of baseline samples (T0). All samples were run in quadruplicate. Data are representative of 3 independent experiments.
