

Supplementary Figure 4. Gene expression modifications in ATC cell lines after JQ1 treatment. mRNA expression of ITPR1, LIF, EFR3B, GINS2, PRIM1, UHRF1, c-MYC, CLU, in FRO and SW1736 cell lines was evaluated by qPCR using β -actin as internal control. Cells were treated either with 5 μ M JQ1 or vehicle for 24 hours. Basal expression (NT) of FRO cells was set at 1.0 and mRNA levels are expressed as relative expression values. Results are shown as mean \pm SD. All samples were run in triplicate. *** $p < 0.001$ by ANOVA test.
