Requirements for nucleocapsid-mediated regulation of reverse transcription during the late steps of HIV-1 assembly

Pierre-Jean Racine¹⁺, Célia Chamontin¹, Hugues de Rocquigny², Serena Bernacchi³, Jean-Christophe Paillart³ and Marylène Mougel^{1,*}

Figure S1: Quantitation of intravirion HIV-1 nucleic acids. Relative amounts of intravirion MS cDNAs and gRNA for the Vif (A) and Psi (B) mutant viruses. Intravirion levels of gRNA and MS DNAs were determined by RT-qPCR and qPCR, respectively (n=2). Number of copies of MS cDNAs and gRNA were determined in the same virus samples, normalized to WT amounts and ratios calculated as (% MS cDNA) / (% gRNA) x 100.
