

Figure S7: Surface expression of Her2/*neu* DARPin displaying G proteins.

Representative flow cytometry plots showing the cell surface expression of Gc Δ 34^{Her2}mut4 variants fused to the indicated Her2/*neu*-specific DARPins (9.01, 9.16, H14R, 9.29, 9.26, G3) or the scFv 4D5++ after transient transfection of HEK-293T cells with the corresponding expression plasmids (empty curves) compared to mock transfected cells (filled curves). Cells were stained with PE-coupled anti-His antibody.
