

Supplemental Figure S3

Supplemental Figure S3. As(V) sensitivity to BSO increased preferentially in cytokinin-depleted plants. Plants were grown on Johnson medium with 12.5 μM Pi in a vertical position for 5 d and then transferred to the same medium with increasing concentrations of BSO alone (top) or with 20 μM As(V) (bottom). Increase in root length was measured in wild-type (Col-0) and 35S:CKX1-overexpressing plants 3 d after transfer. Bars show mean ± SD ($n \geq 15$). * $P < 0.01$ (Student's t -test).
