

## EIF2S3Y suppresses the pluripotency state and promotes the proliferation of mouse embryonic stem cells

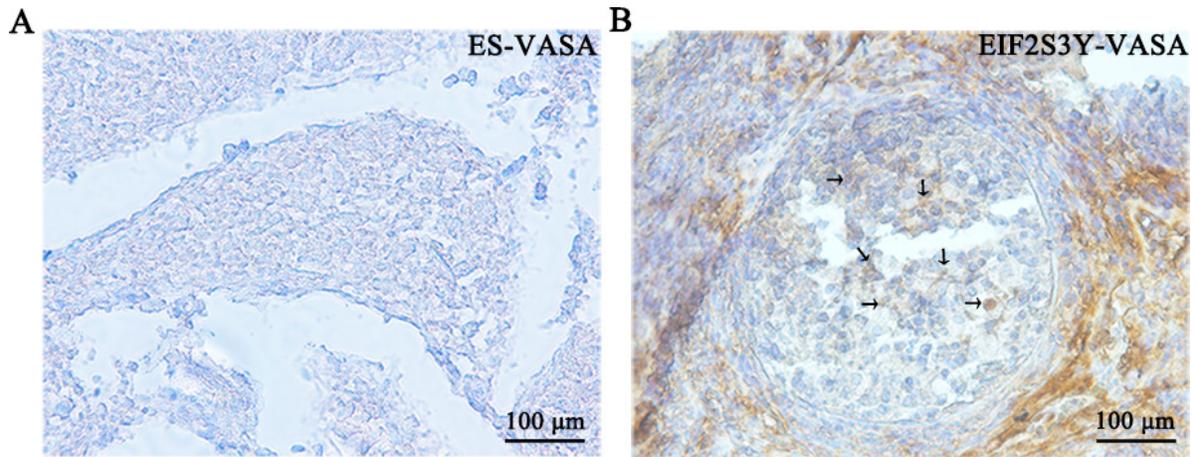

### Supplementary Materials

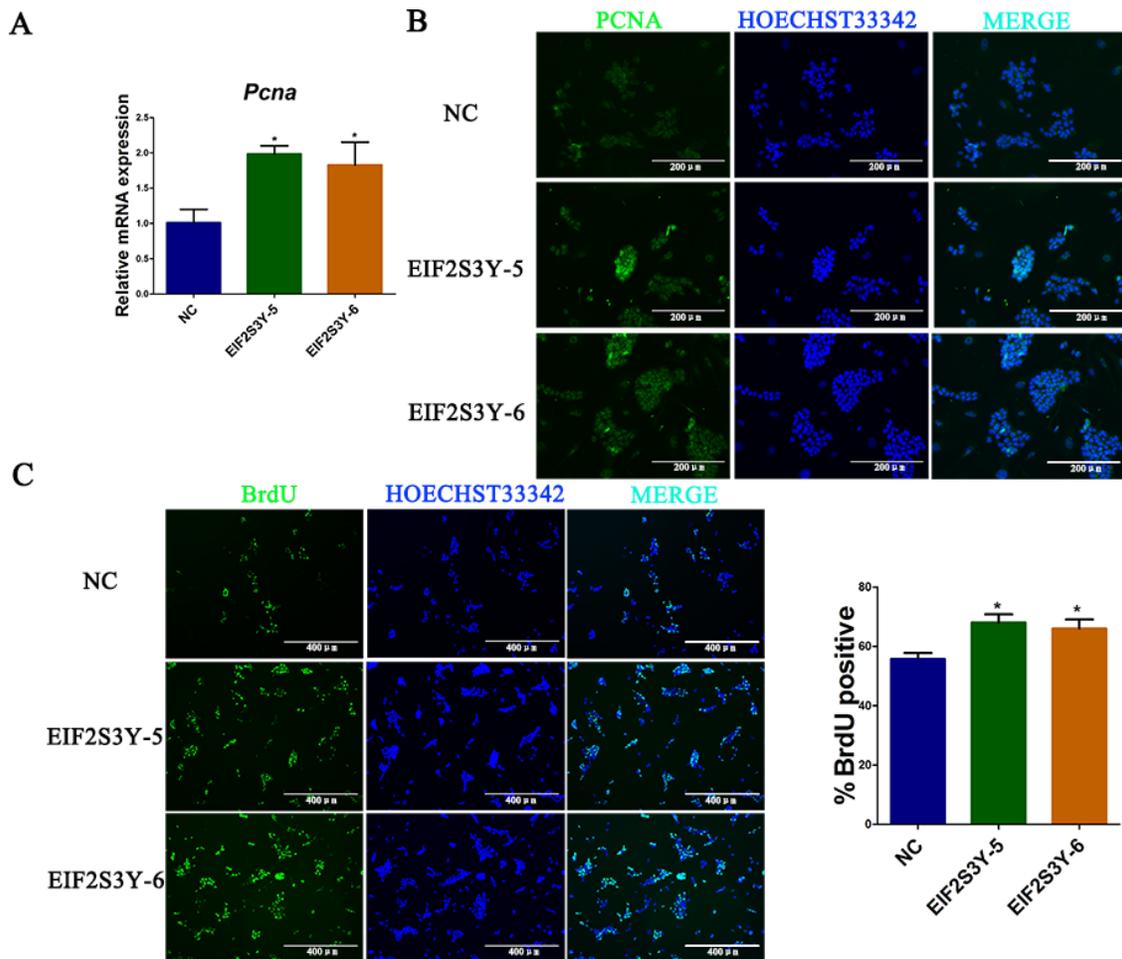

**Supplementary Figure 1:** *Eif2s3y* mRNA expression profile in ES-derived EIF2S3Y cell lines. Relative expression of *Eif2s3y* mRNA in NC, and EIF2S3Y-(2, 5, 6, 7) cell lines by qRT-PCR. ( $n = 3$  for each group, \*\* $P < 0.01$ , \*\*\* $P < 0.001$ , vs. NC).

**Supplementary Figure 2:** Immunofluorescence staining of OCT4 and SOX2 in ES-derived EIF2S3Y cell lines. (A, B) Immunofluorescence staining of OCT4 (A) and SOX2 (B) (green), nucleic acids were stained with Hoechst 33342 (blue). Scale bar = 200  $\mu\text{m}$  ( $n = 3$  for each group).

**Supplementary Figure 3: Immunohistochemistry of VASA in the testes transplanted with ES-derived cell lines.** (A) Immunohistochemistry staining of VASA in the testes that were transplanted with ES or EIF2S3Y-5 cell line. VASA positive cells were indicated with arrows. Scale bar, 100  $\mu\text{m}$  ( $n = 2$  for each group).

**Supplementary Figure 4: Proliferation profile of ES-derived cell lines.** (A) Relative expression of *Pcna* by qRT-PCR in NC, EIF2S3Y-5 and EIF2S3Y-6 cell lines. (B) PCNA immunofluorescence staining in NC, EIF2S3Y-5 and EIF2S3Y-6 cell lines. (C) BrdU immunofluorescence staining and percentage of BrdU-positive cells in NC, EIF2S3Y-5 and EIF2S3Y-6 cell lines. ( $n \geq 3$  for each group,  $*P < 0.05$ , vs. NC).
