

Supplementary Materials

for the manuscript by S.Sales, J.Graessler, S.Ciucci, R.Al-Atrib, T.Vihervaara, K.Schuhmann, D.Kauhanen, M.Sysi-Aho, S.R.Bornstein, M.Bickle, C.V.Cannistraci, K.Ekroos and A.Shevchenko
"Gender, Contraceptives and Individual Metabolic Predisposition Shape a Healthy Plasma Lipidome"

Table of Content

Supplementary Table S1 Basal characteristics of the study cohort (extended table).

Supplementary Table S5 Exclusion criteria and gender-specific causes for exclusion from the study

Supplementary Figure S1: Concentrations of individual lipid species

Supplementary Figure S2 Total concentrations of lipid classes.

Supplementary Figure S3 Values of clinical and anthropometric indices.

Supplementary Tables S2, S3 and S4 are Excel spreadsheets and uploaded as separate files.

Supplementary Table 1. Basal characteristics of the study cohort (extended table).

Parameter	units	Men (n=36)			Women (n=35)			Mann-Whitney Test Benjamini corrected (p)
		Mean	SD	95% CI	Mean	SD	95% CI	
Age	years	24.0	2.7	23.1-24.9	25.5	2.8	24.5-26.4	0.0244

Supplementary Table S5.
Exclusion criteria and gender-specific causes for exclusion from the study

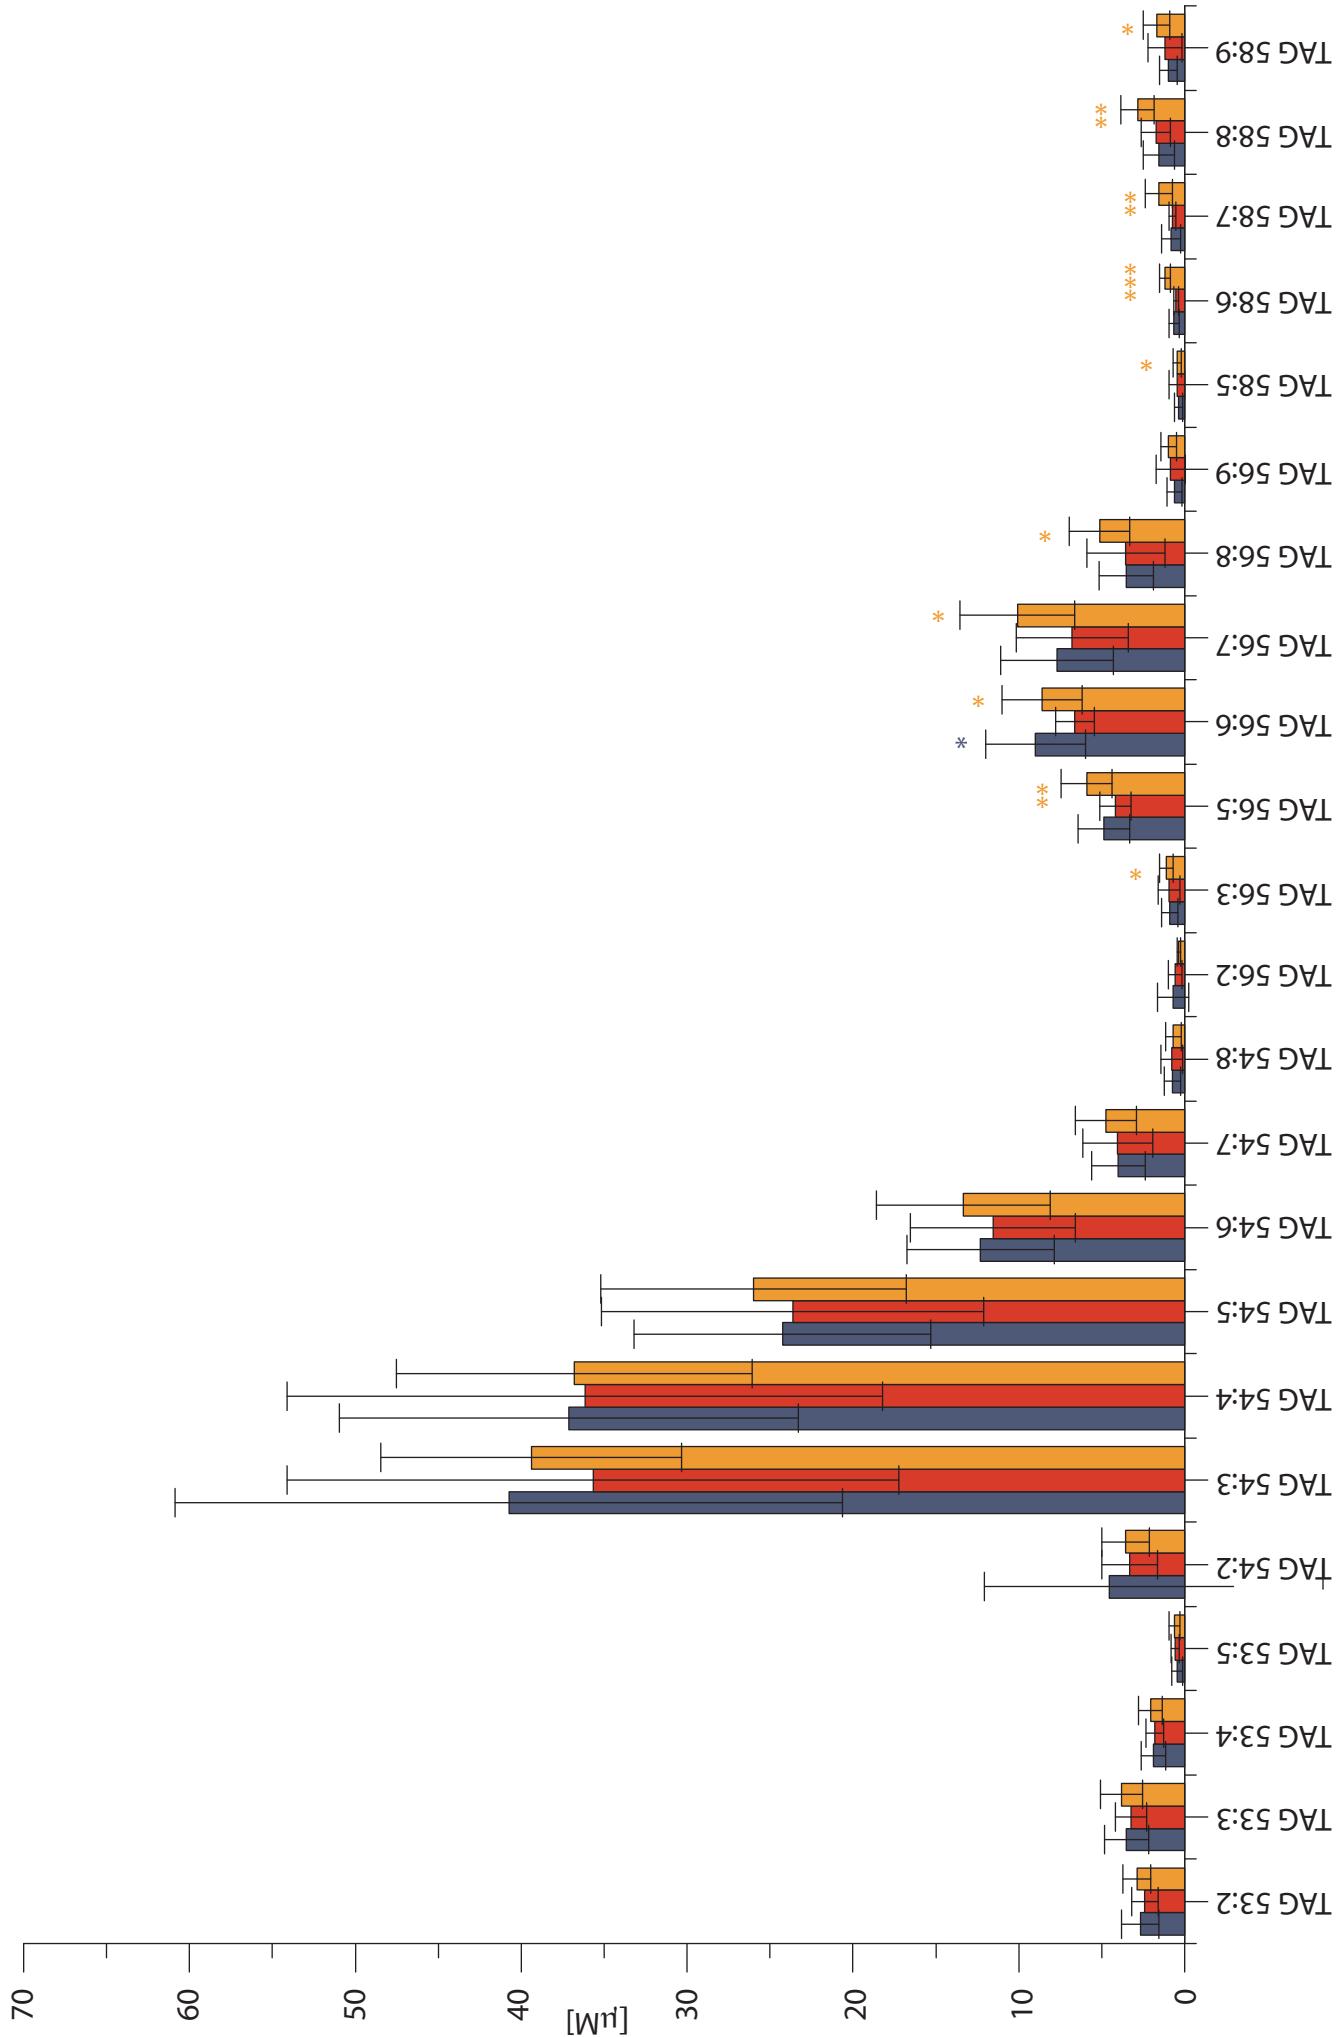

Parameter	units	Cut-off values	Excluded Individuals (n)	
			Males (12)	Females (20)
Blood pressure (systolic/diastolic)	mmHg	> 140 / 85		
ALAT	$\mu\text{mol/L}^*\text{s}$	> 0.80		
γGT	$\mu\text{mol/L}^*\text{s}$	> 0.80		
Serum creatinine	$\mu\text{mol/L}$	> 110 men / > 95 women		
C-reactive protein	mg/L	> 5	3	2
Hemoglobin	mmol/L	< 8.0 men / < 7.4 women		
$\text{HbA}_{1\text{C}}$	%	> 5.7		
Total cholesterol ¹	mmol/L	> 5.2	5	14
LDL-cholesterol ¹	mmol/L	> 4.0		
HDL-cholesterol ¹	mmol/L	< 0.9 men / < 1.1 women		
Triglycerides ¹	mmol/L	> 1.7	2	
Plasma glucose ¹	mmol/L	> 5.5		
Plasma insulin ¹	pmol/L	> 250		1
Uric acid ¹	$\mu\text{mol/L}^*\text{s}$	> 490	1	

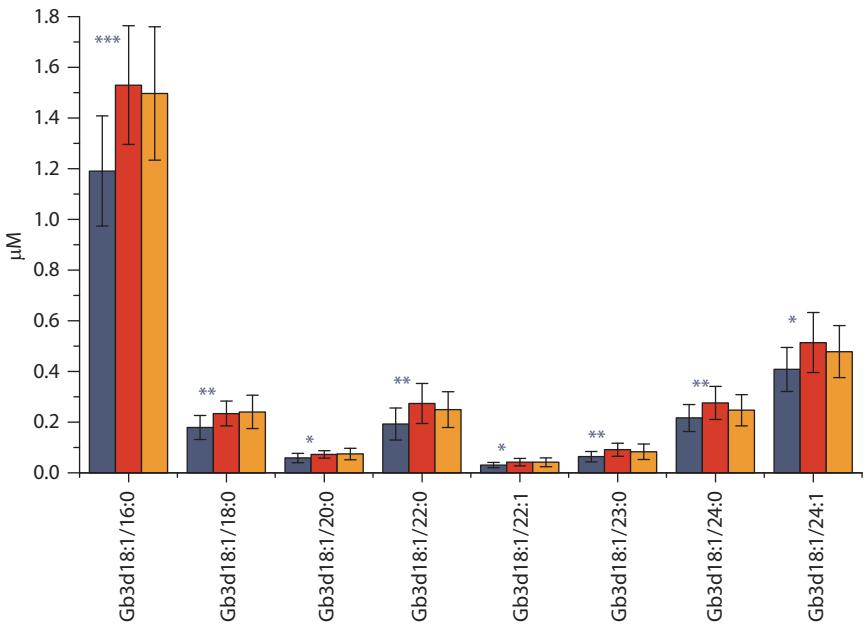

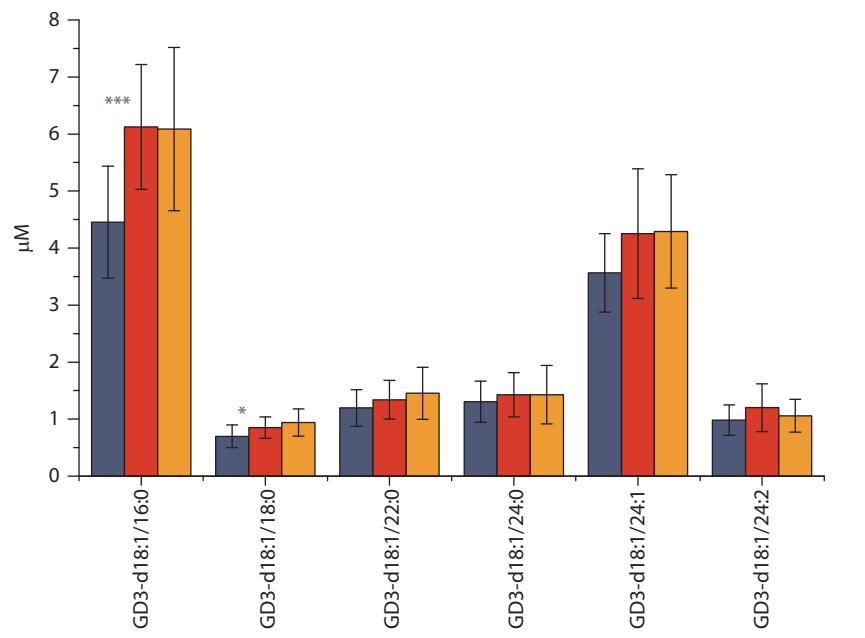

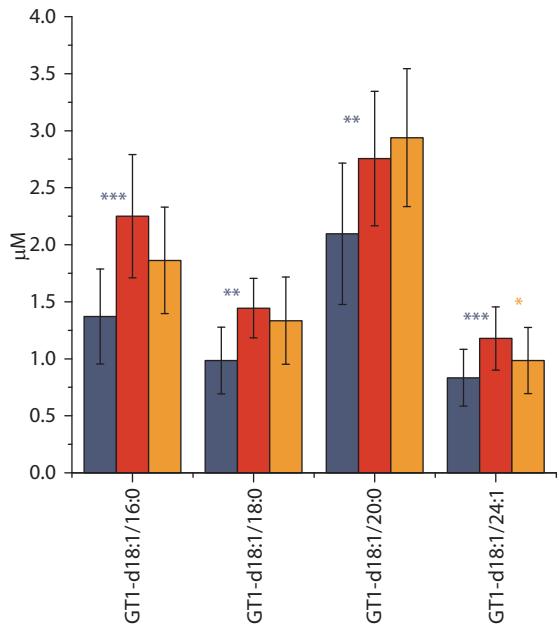

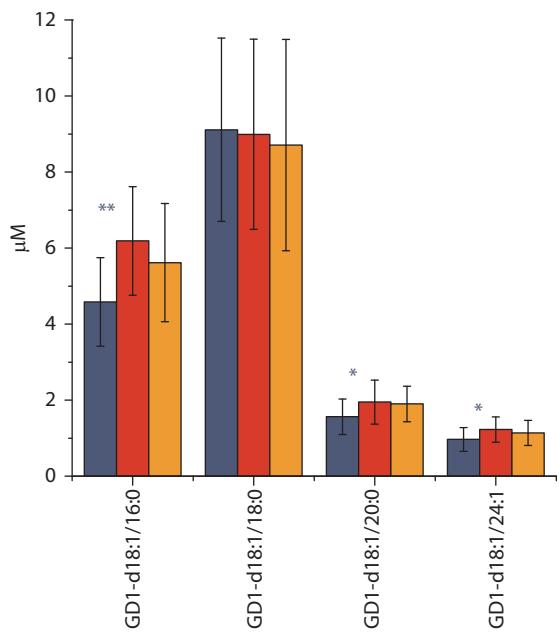

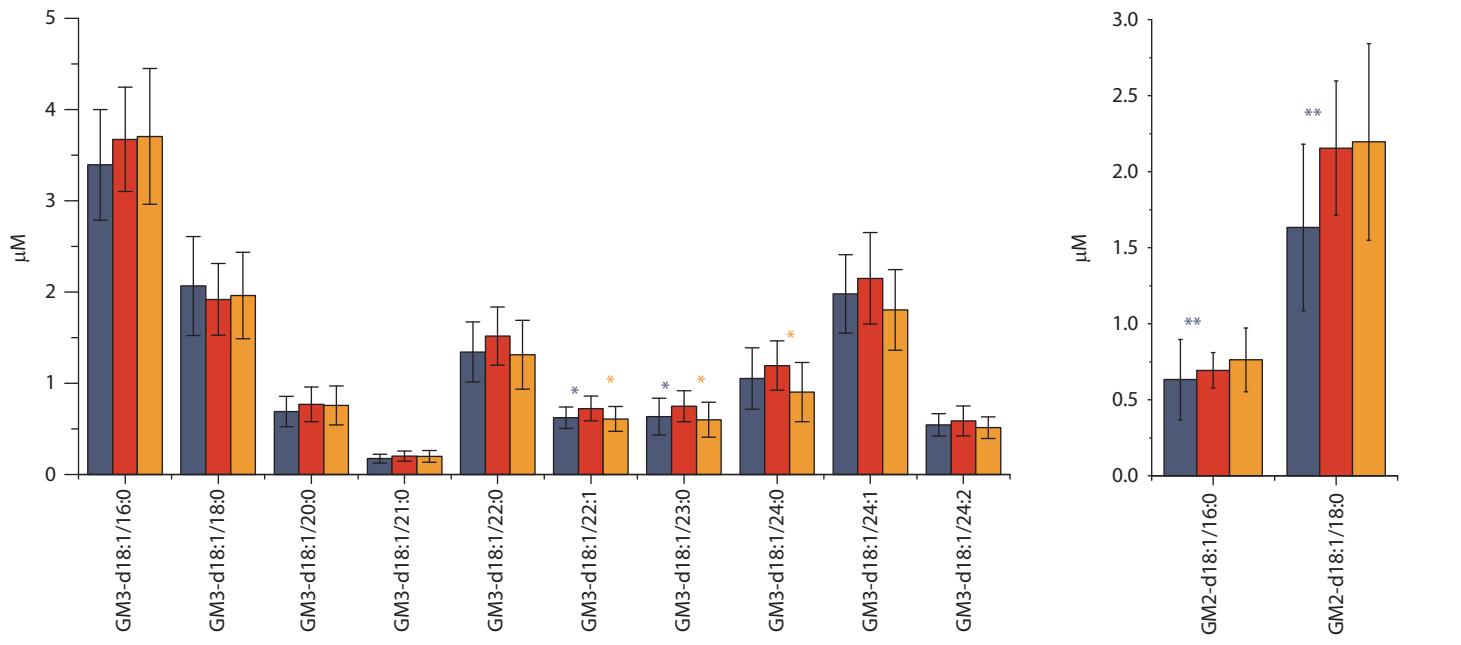

¹ values after 12h overnight fasting; ALAT: alanine aminotransferase, γGT : gamma glutamyltransferase, $\text{HbA}_{1\text{C}}$: glycosylated hemoglobin

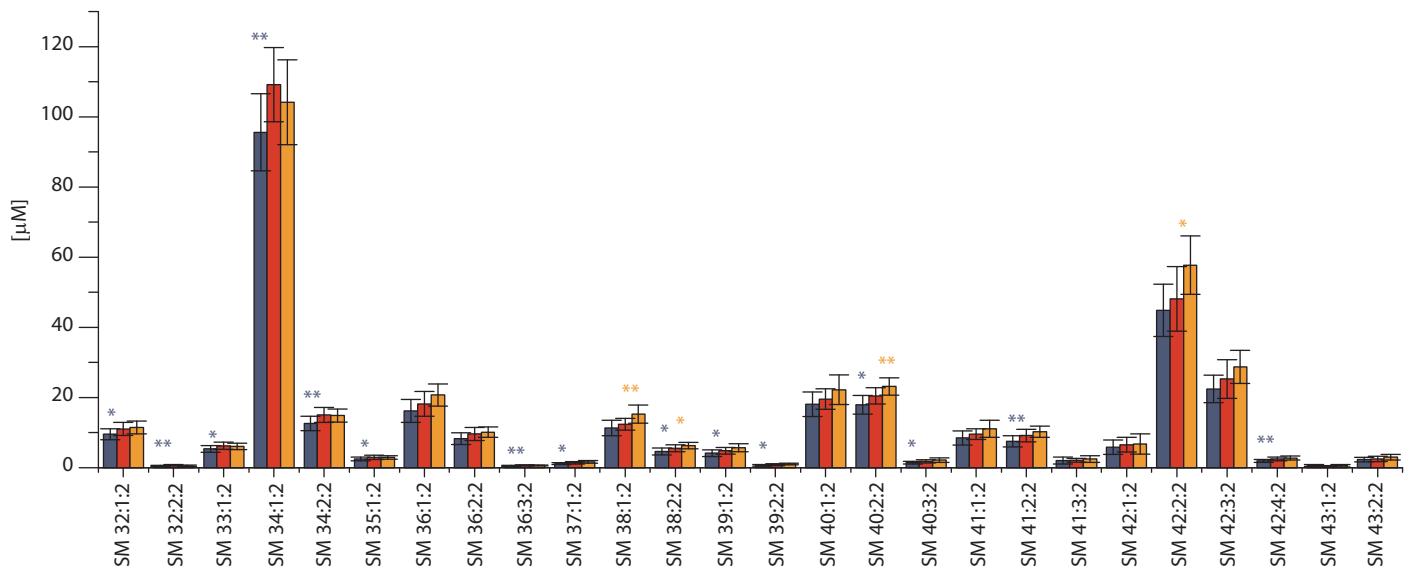

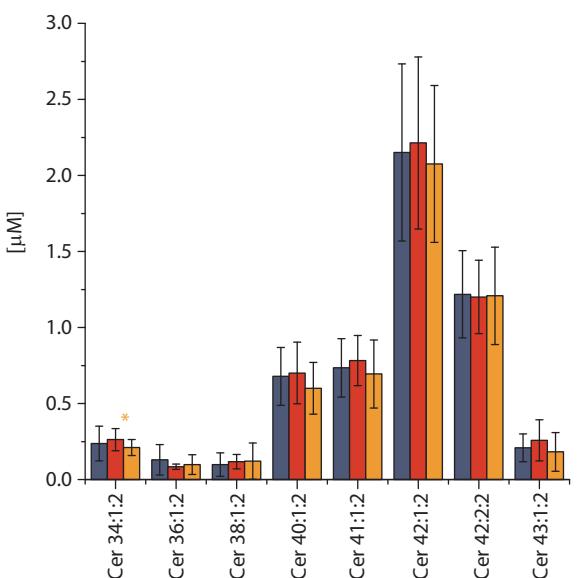

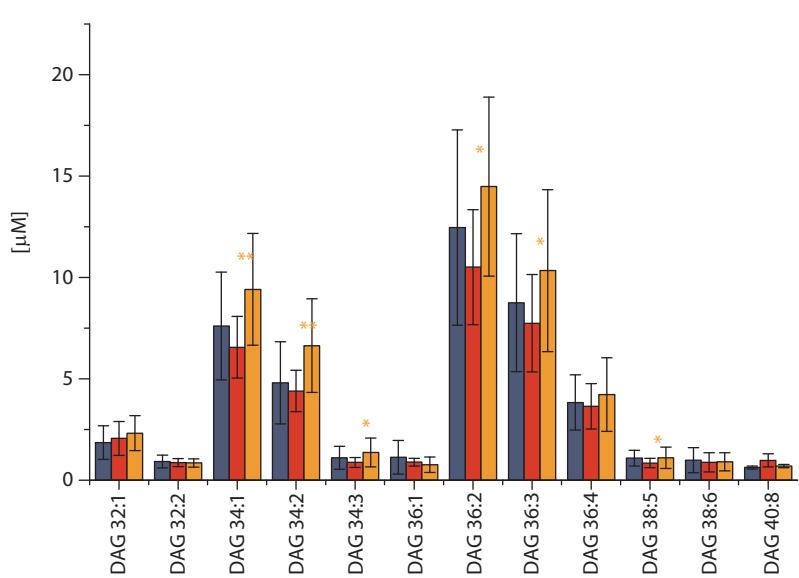

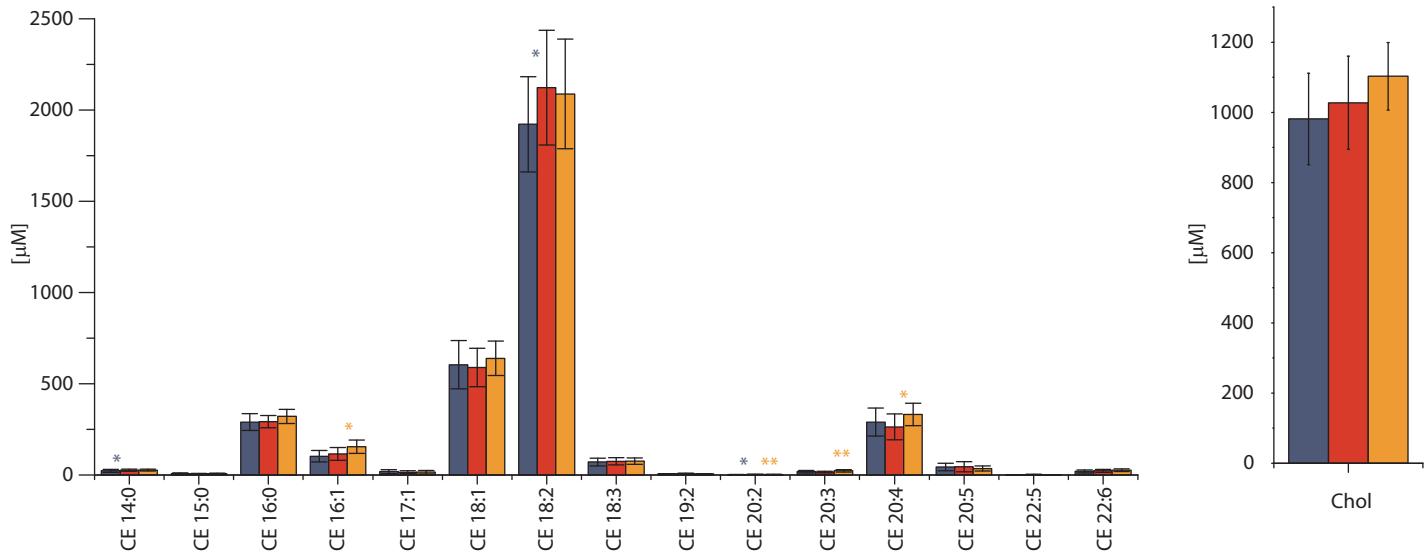

One male individual was excluded due to missing data; two females were excluded due to taking iron preparations; one due to lactation

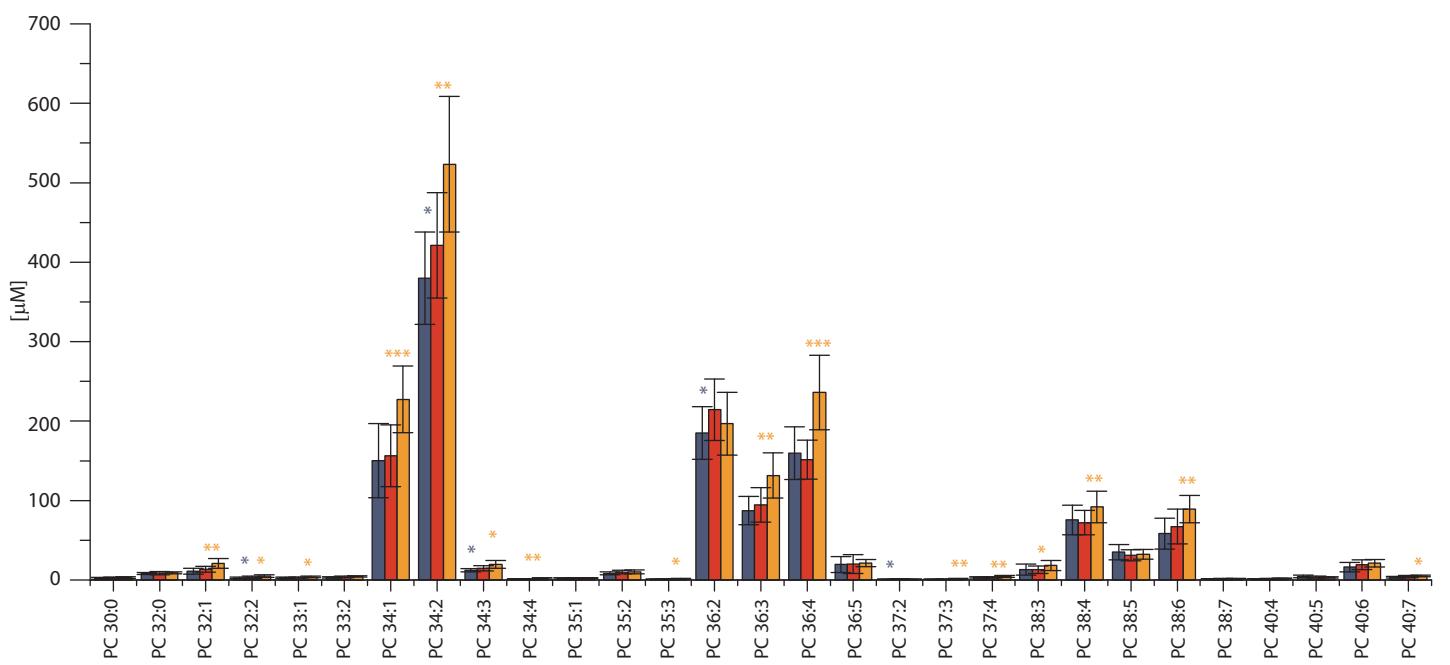

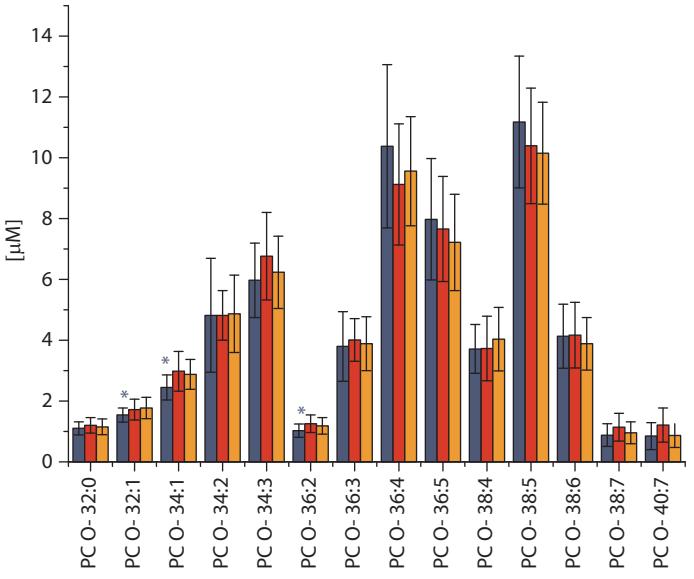

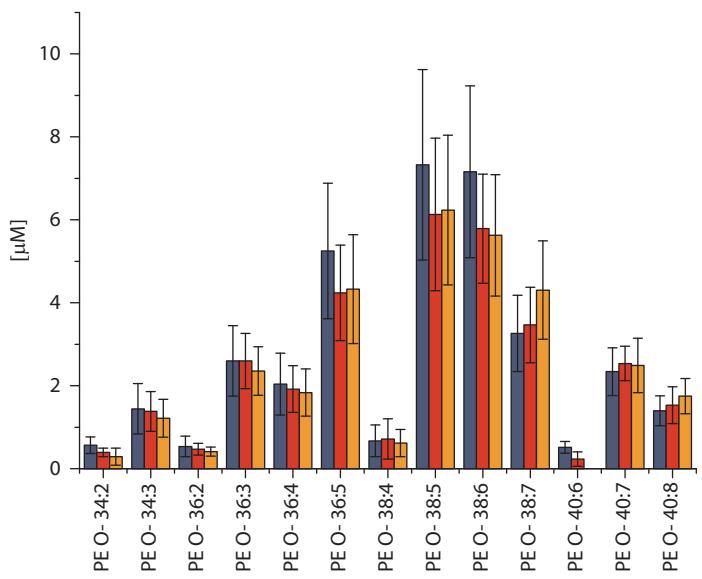

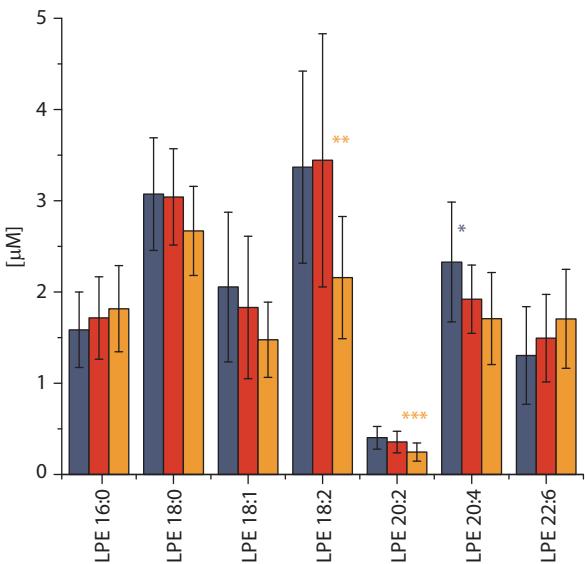

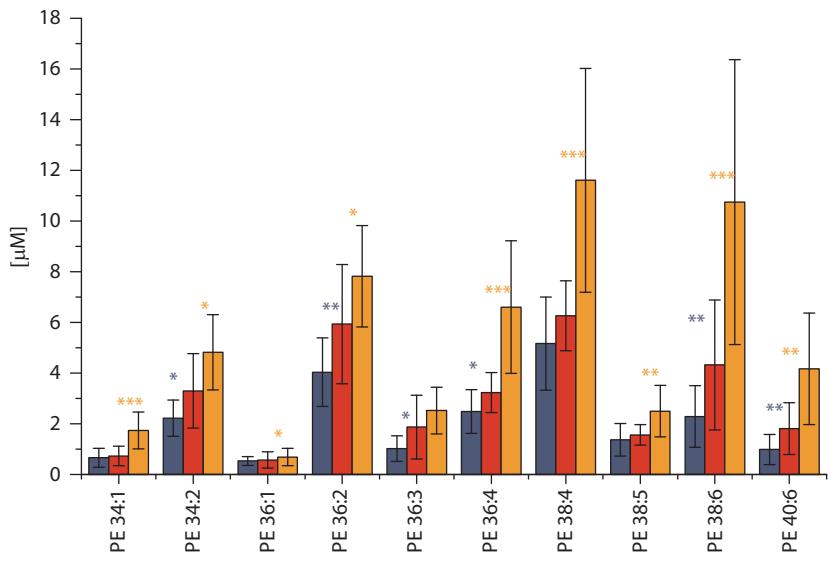

Supplementary Figure S1

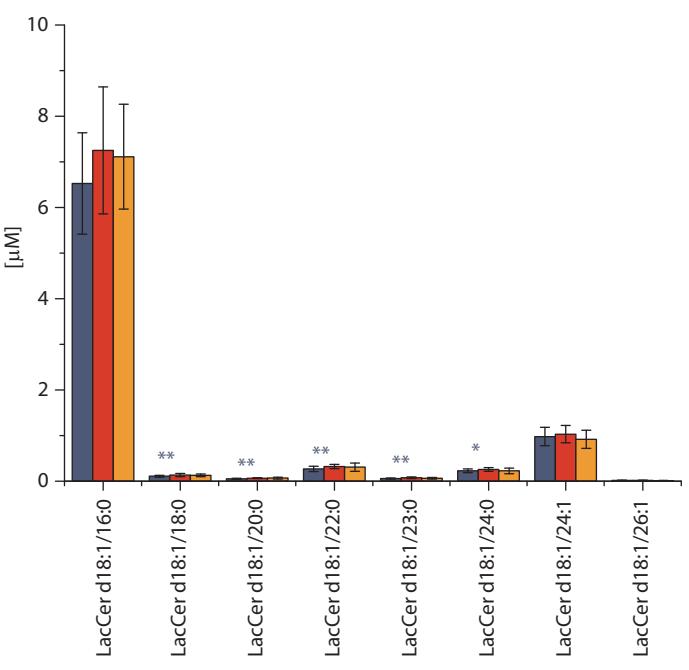

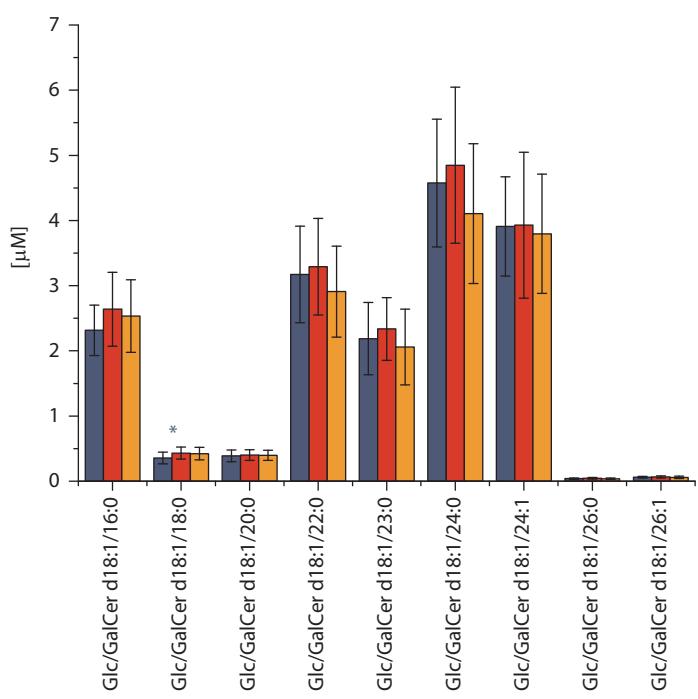

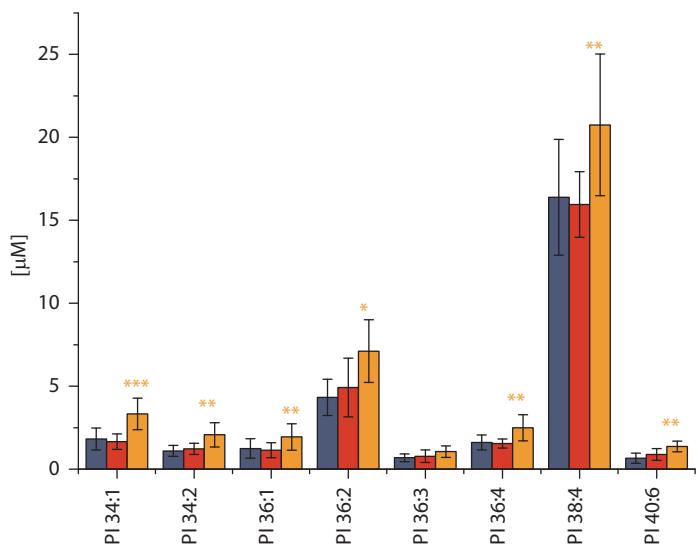

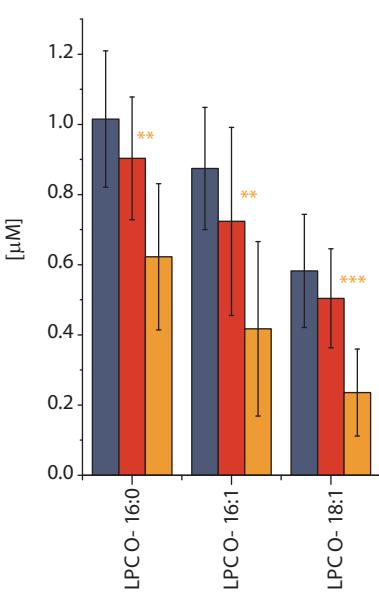

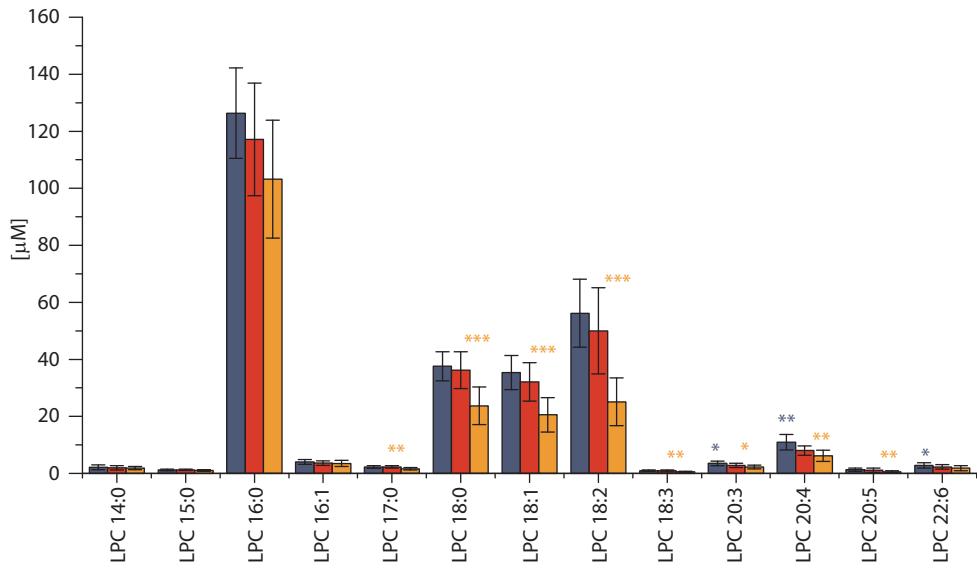

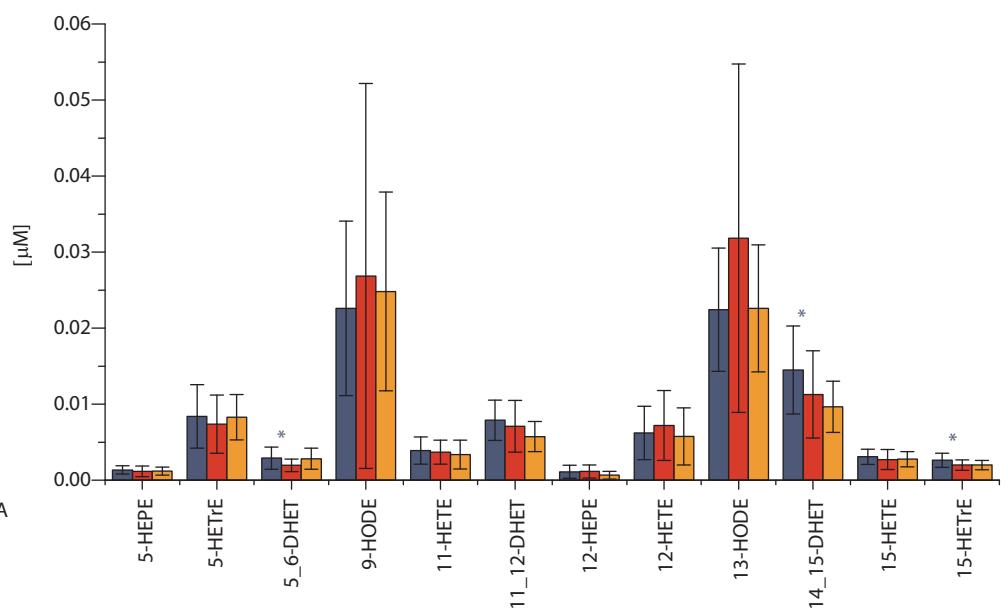

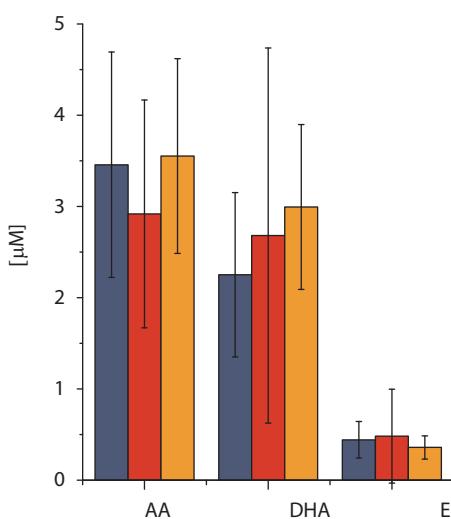

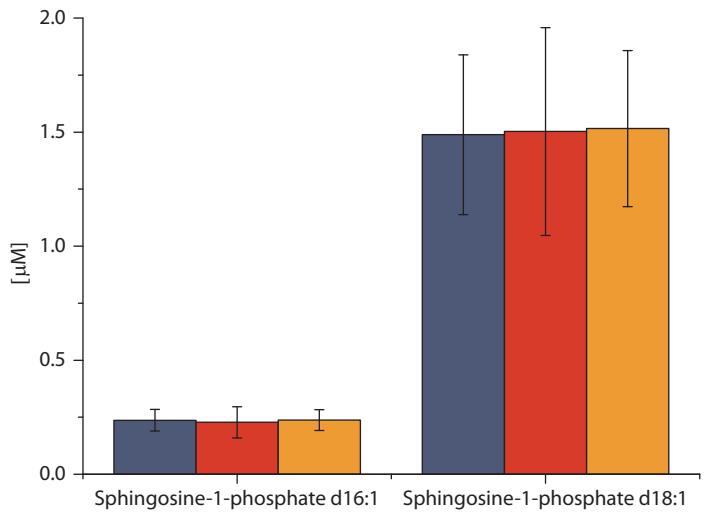

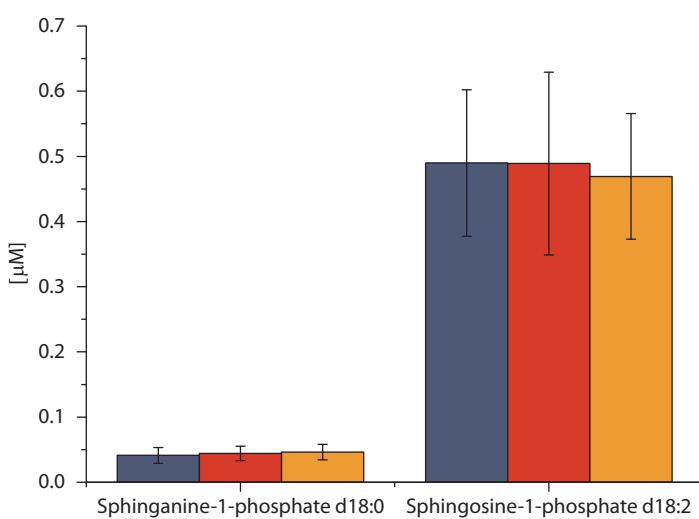

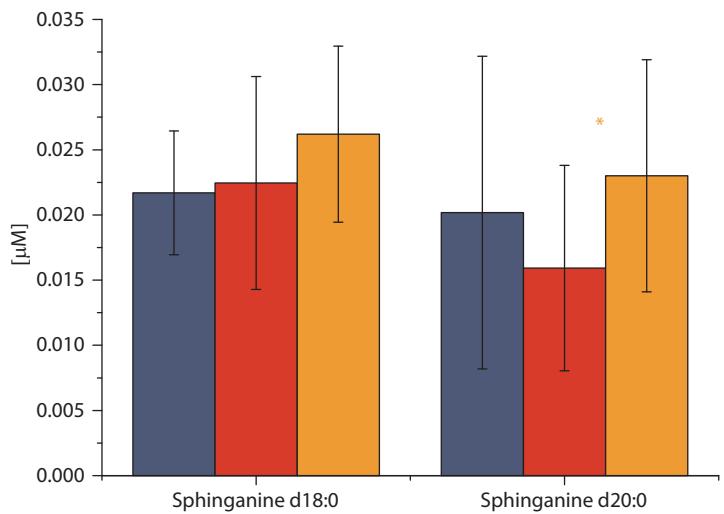

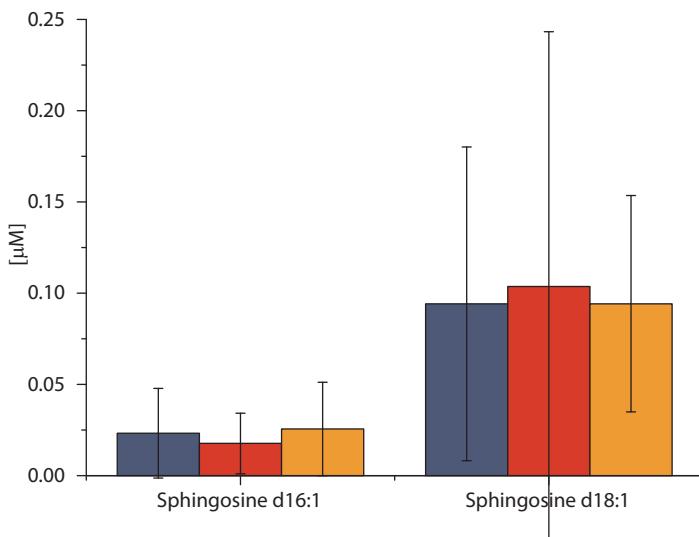

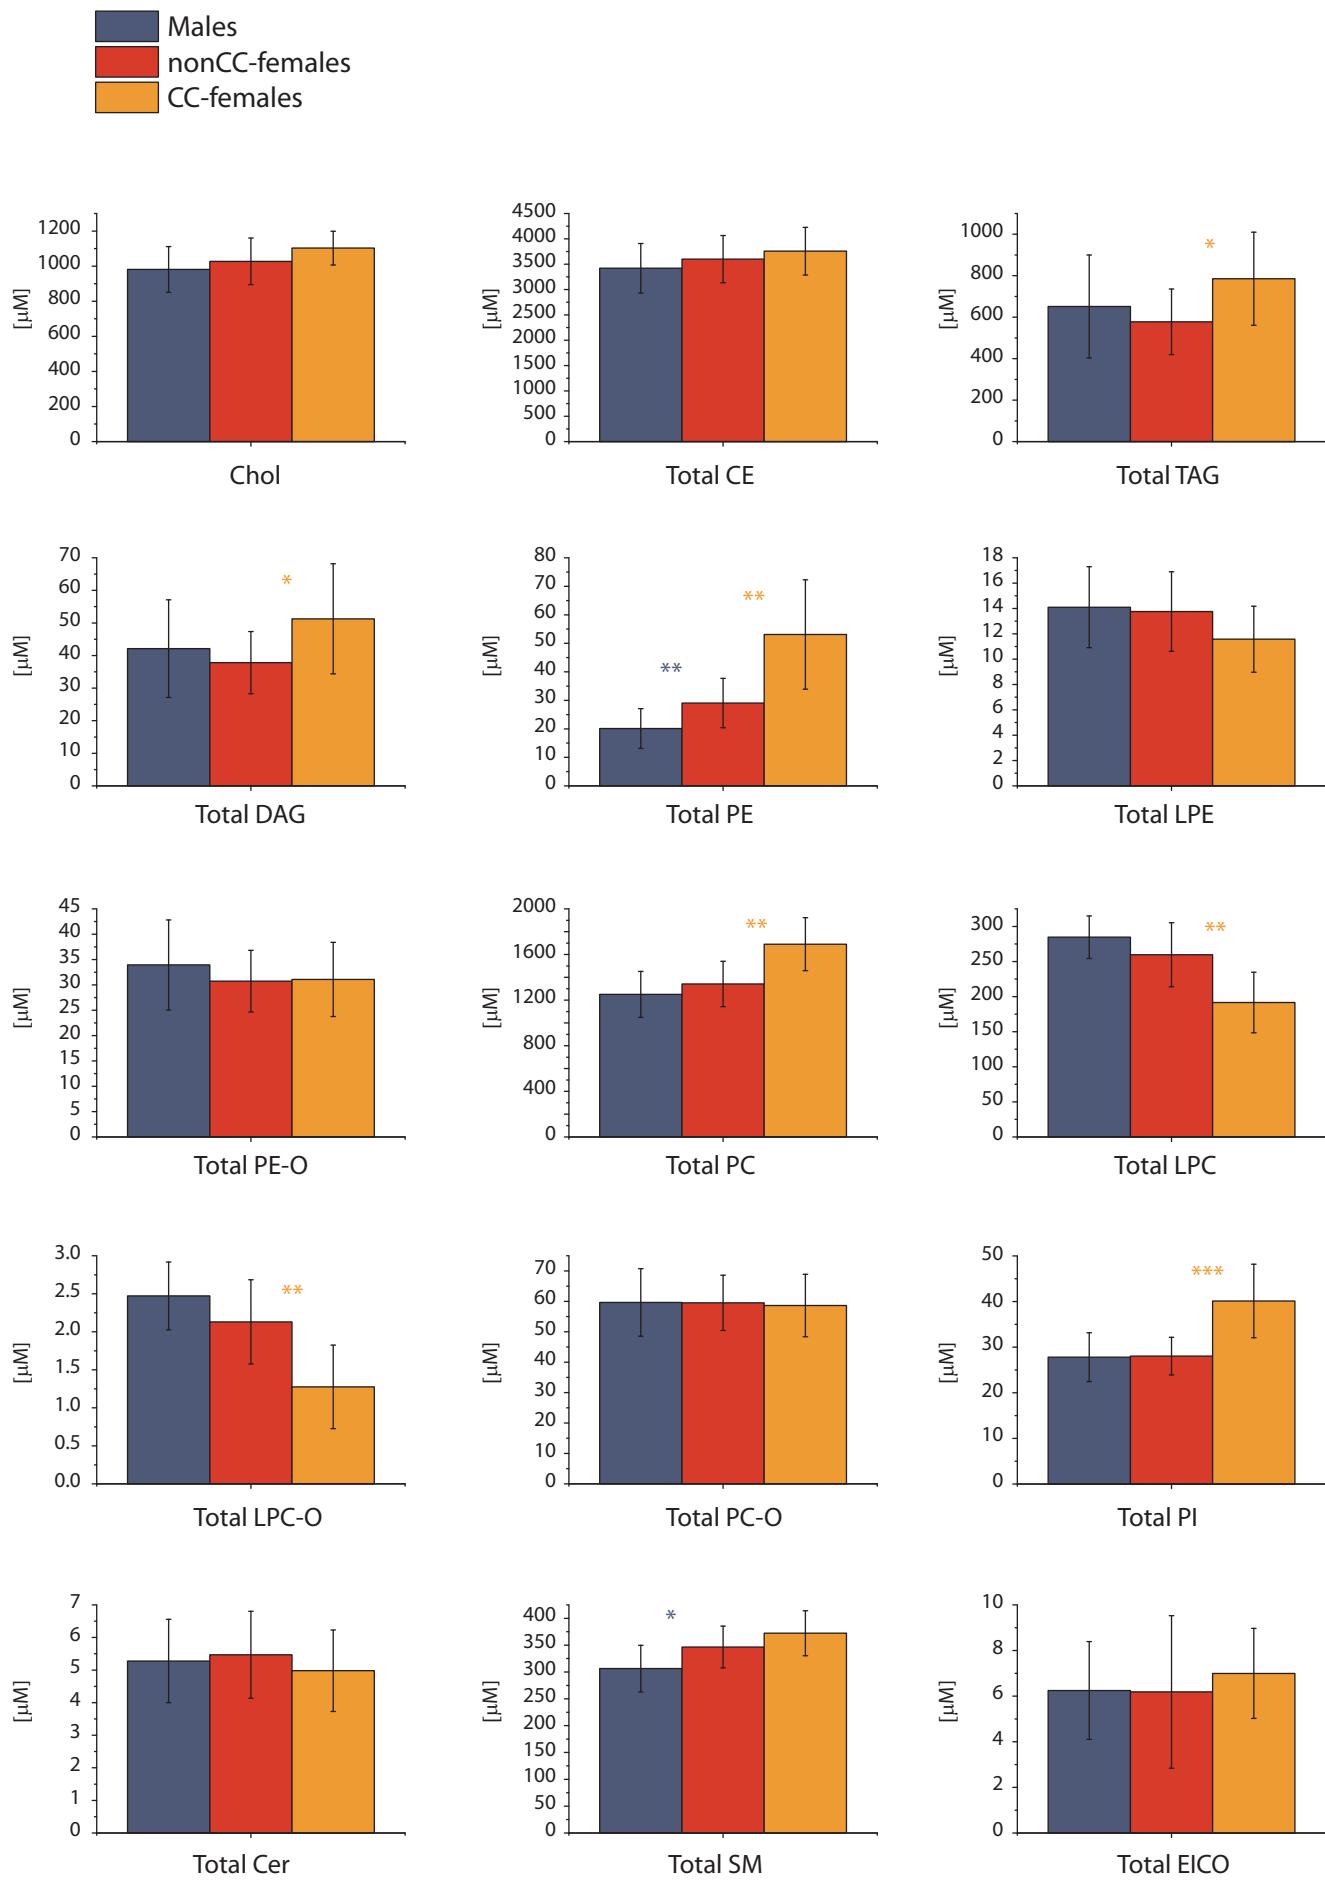

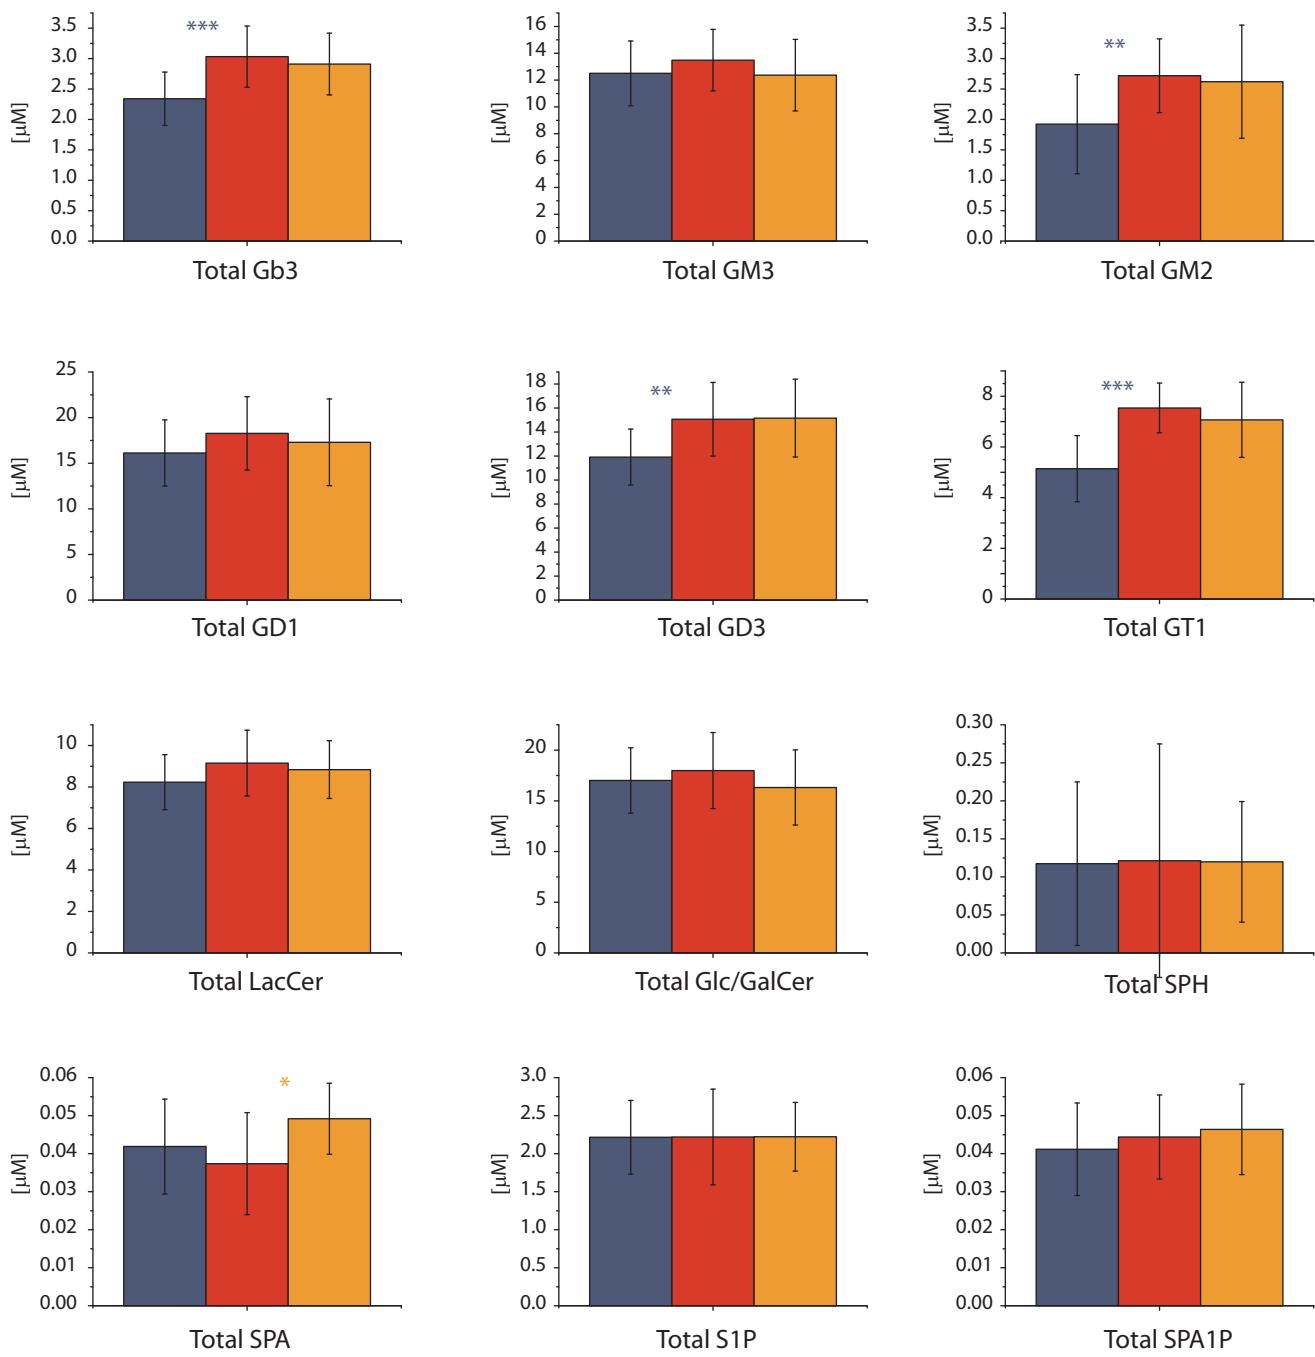

Supplementary Figure S1. Concentrations of individual lipid species. Comparison between males ($n=36$), and nonCC-females ($n=16$) (blue stars), and between nonCC-females ($n=16$) and CC-females ($n=19$) (orange stars). Data are the mean \pm SD. Statistic was performed by nonparametric Mann-Whitney test; Benjamini corrected.
* $p<0.05$; ** $p<0.01$; *** $p<0.001$.

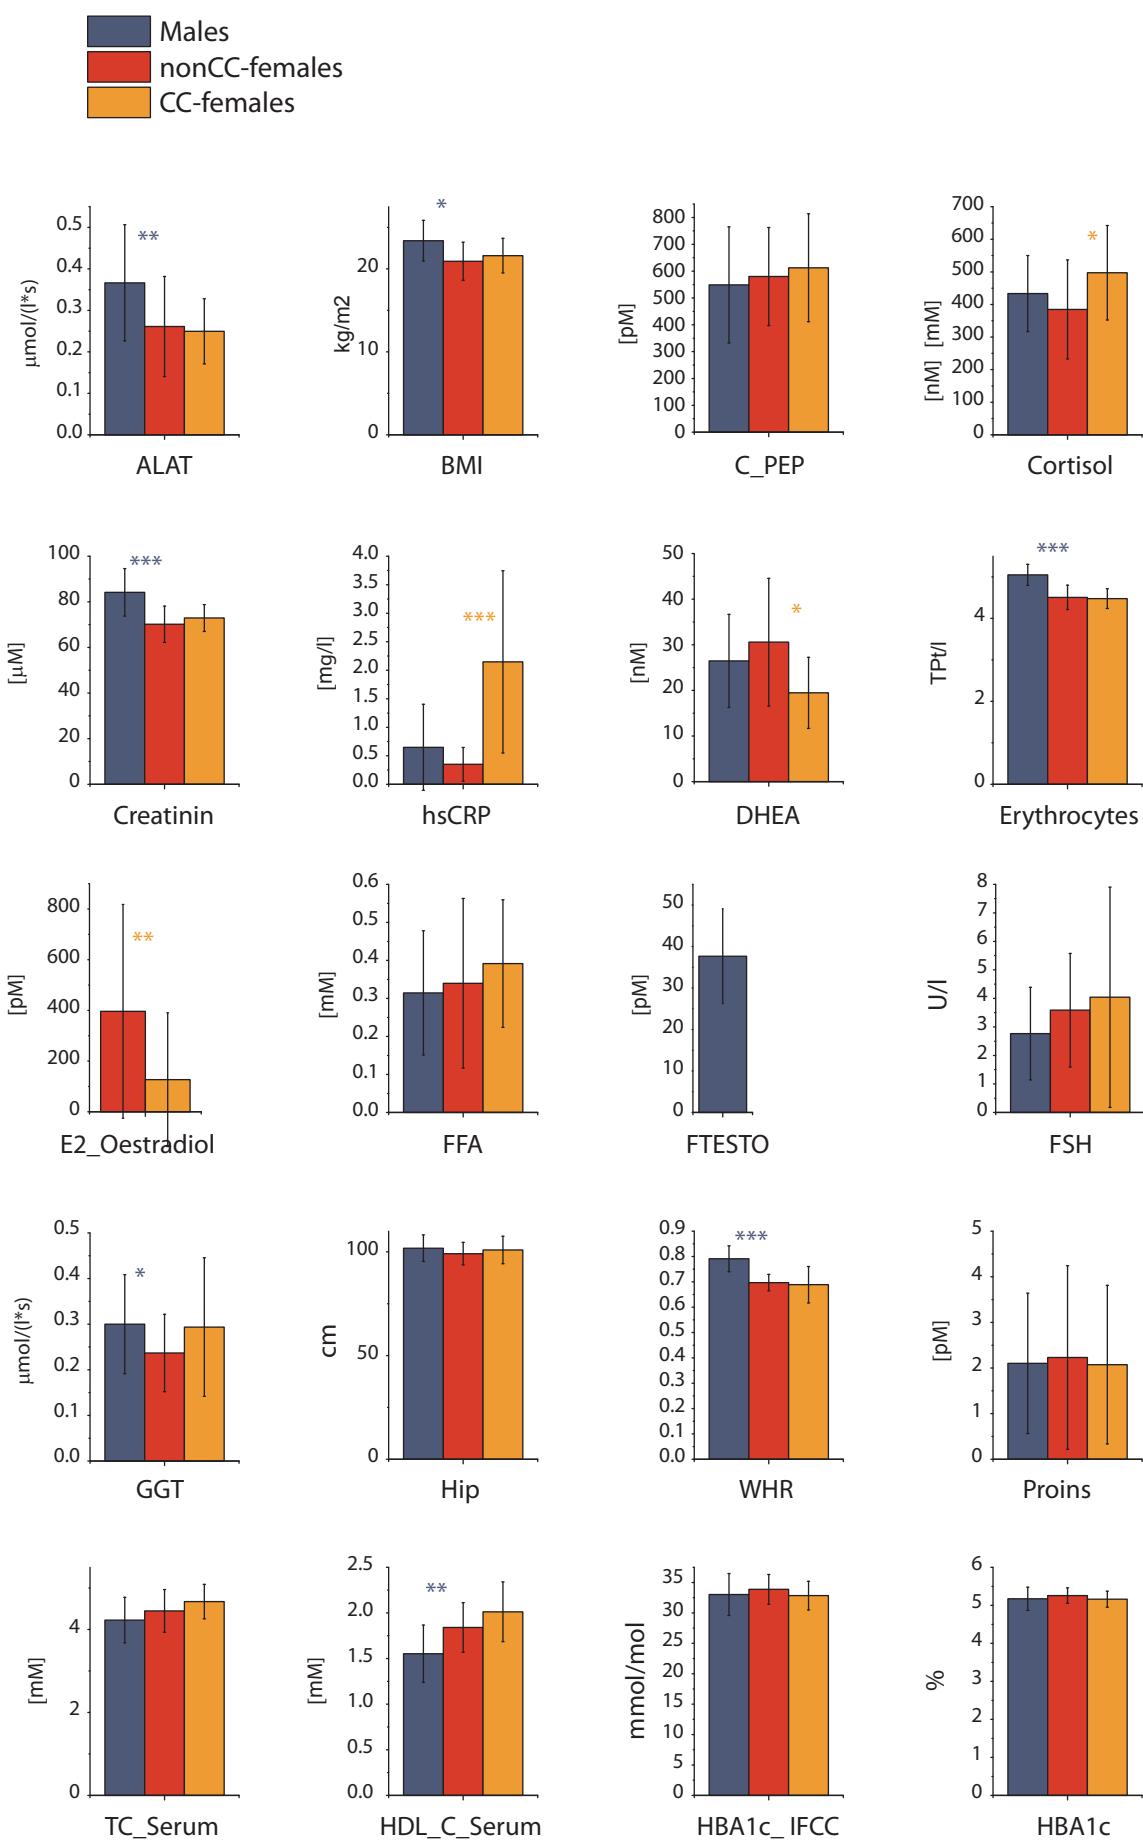

Supplementary Figure S2

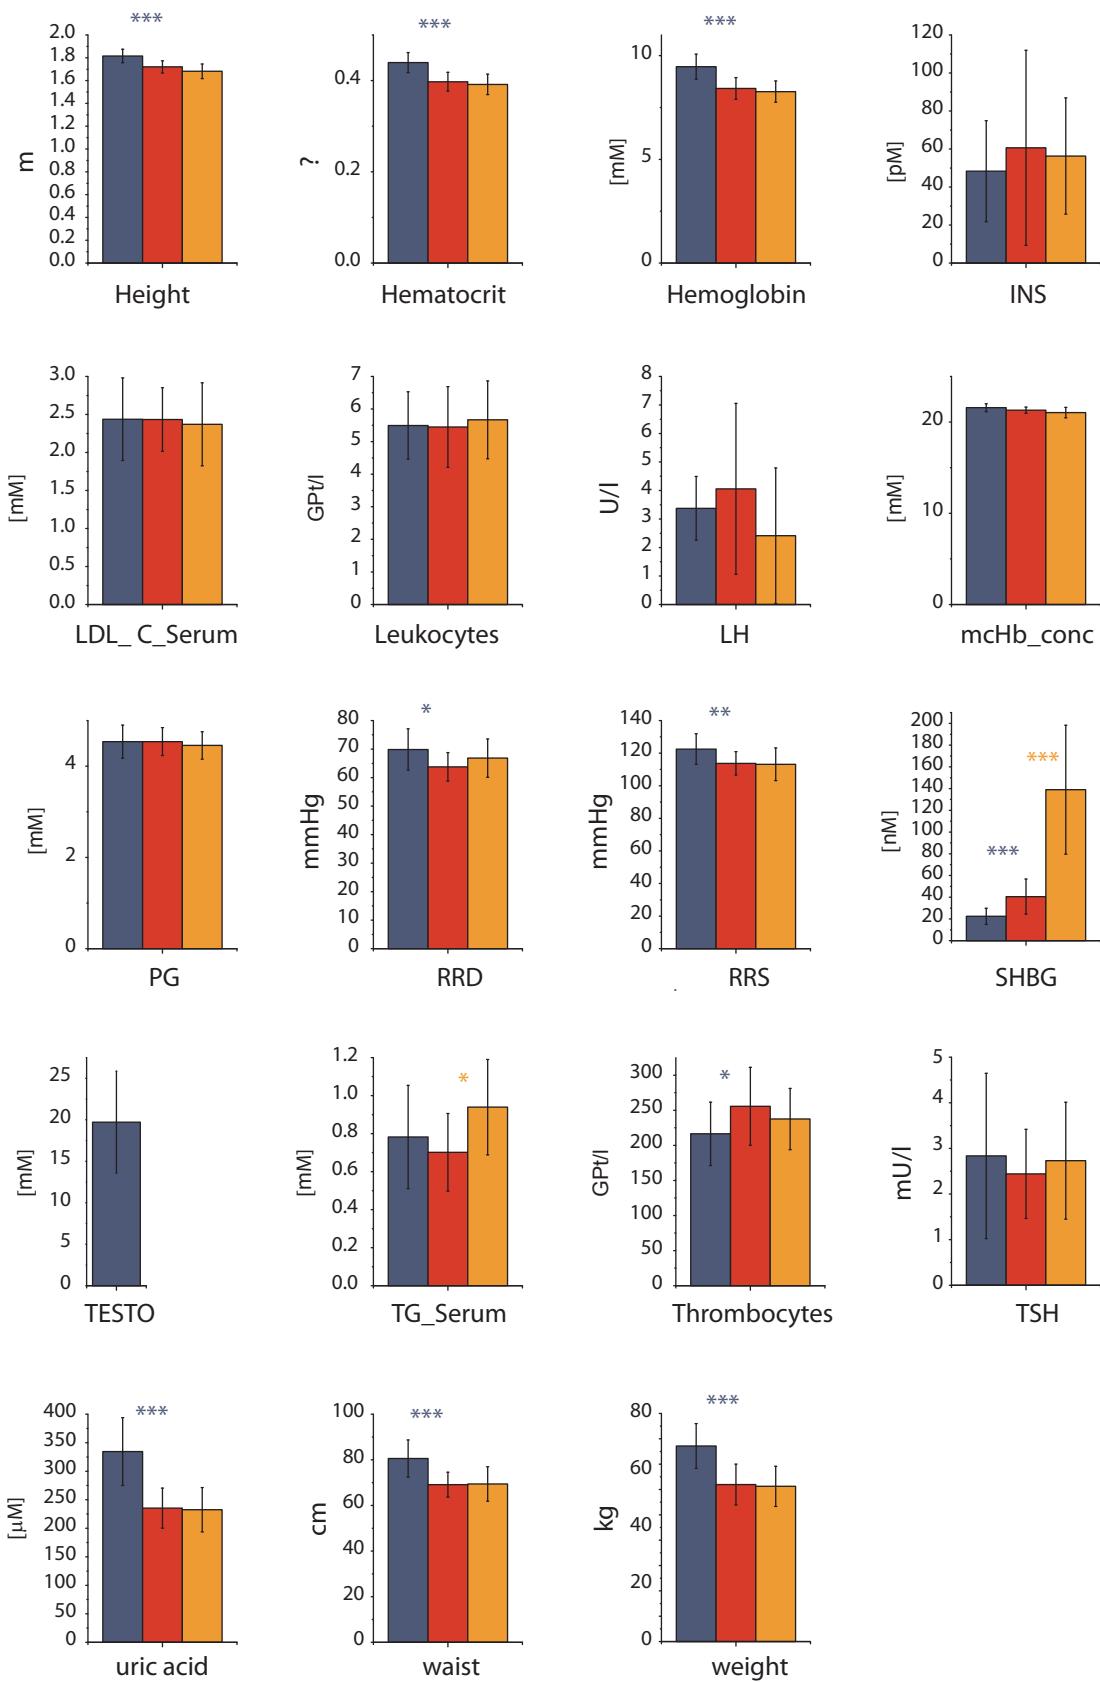

Supplementary Figure S2. Total concentrations of lipid classes. Comparison between males ($n=36$), and nonCC-females ($n=16$) (blue stars), and between nonCC-females ($n=16$) and CC-females ($n=19$) (orange stars). Data are the mean \pm SD. Statistics was performed by nonparametric Mann-Whitney test; Benjamini corrected.
 $*p<0.05$; $**p<0.01$; $***p<0.001$.

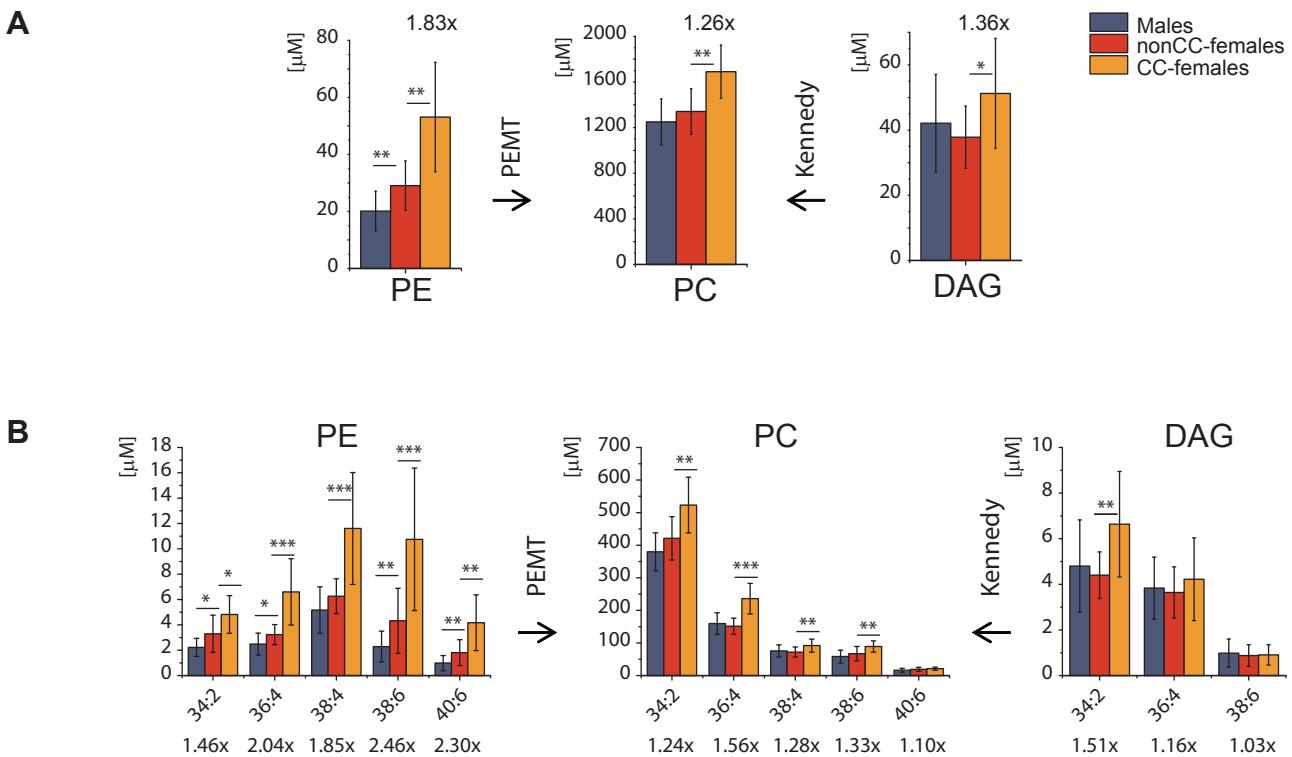

Supplementary Figure S3

Supplementary Figure S3. Values of clinical and anthropometric indices. Comparison between males ($n=36$), and nonCC-females ($n=16$) (blue stars), and between nonCC-females ($n=16$) and CC-females ($n=19$) (orange stars). Data are the mean \pm SD. Statistic was performed by nonparametric Mann-Whitney test; Benjamini corrected.
 $*p<0.05$; $**p<0.01$; $***p<0.001$.

Supplementary Figure S4

Supplementary Figure S4. Estradiol-dependent and -independent regulation of lipid concentrations in plasma. **(A)** Total concentration of DAG, PE, and PC in males ($n=36$), nonCC-females ($n=16$), and CC-females ($n=19$). Fold differences between nonCC-females and CC-females are above the concentration bars. **(B)** Several abundant DAG, PE, and PC species and corresponding fold differences (shown below concentration bars) between nonCC-females and CC-females. Conversion of polyunsaturated PE species into corresponding PC is faster in nonCC-females compared to CC-females. * $p<0.05$; ** $p<0.01$; *** $p<0.001$ (nonparametric Mann-Whitney test; Benjamini corrected). Data are the mean \pm SD.
