Supporting information for article:

**Crystal structure of a dimerization domain of human caprin-1:
insights into the assembly of an evolutionarily conserved
ribonucleoprotein complex containing caprin-1, FMRP and G3BP1**

Yuhong Wu, Jiang Zhu, Xiaolan Huang and Zhihua Du

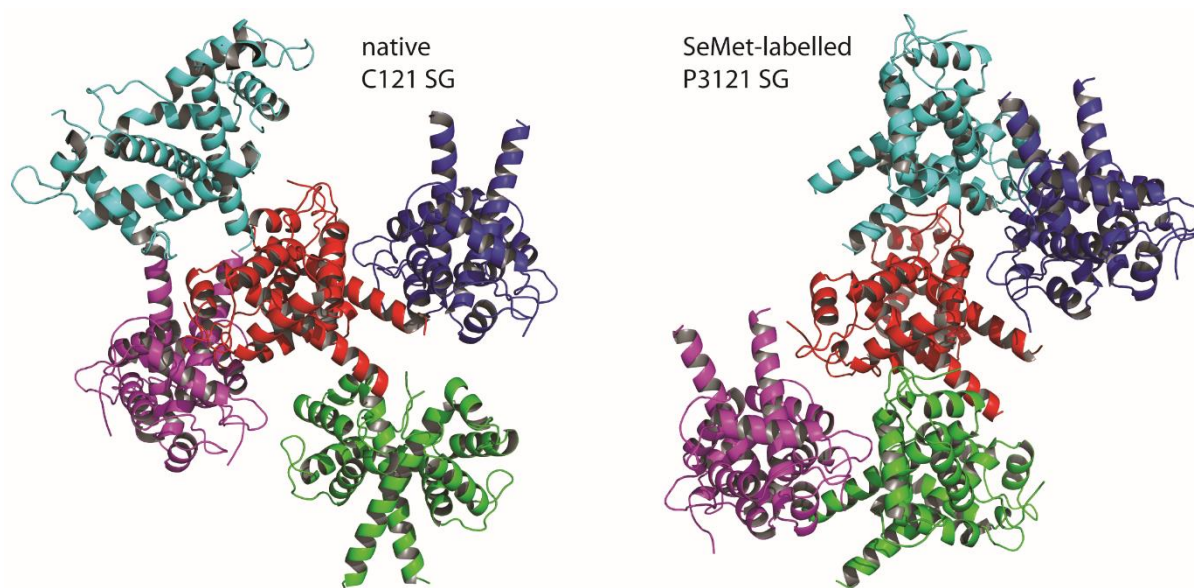

Figure S1 Different crystal packings in the two different crystal forms of Caprin-1 dimer. Five homodimeric Caprin-1 structures are shown in different colours.
