**A unique mating strategy without physical contact during fertilization in Bombay Night Frog (*Nyctibatrachus humayuni*) with the description of a new form of amplexus and female call**

**Figure S1** Study site and breeding habitat of *Nyctibatrachus humayuni*. (A) Distribution of *N. humayuni* in the Western Ghats of India. Study site is marked in red. (B) A mountain stream flowing over laterite rocks with overhanging vegetation, which is the typical breeding habitat of *N. humayuni* in the forest at Humbarli village, Koyna. (C) An adult male of *N. humayuni* is seen calling from overhanging vegetation.
