S8 Table. Data from Titrations of Top Botanical Candidates for Inhibition of Fructose-induced Elevation in UA Levels.

Genus	Species	SampleID	Lot #	Conc (µg/mL)	UA (mg/dL) (Fructose Only Controls)	UA (mg/dL) (No Fructose Controls)	UA (mg/dL)	UA Inhibition (%)	*UA IC ₅₀ (µg/mL)
-------	---------	----------	-------	--------------	--	--------------------------------------	---------------	----------------------	---------------------------------

IC₅₀: half maximal inhibitory concentration. OD: optical density. UA: uric acid.

*UA IC₅₀s were calculated using nonlinear regression (three parameters) in GraphPad Prism 5.03. To generate a best fit, an upper concentration (10,000 µg/mL at 100% inhibition) and a lower concentration (0.001 µg/mL at 0% inhibition) were added.
