SUPPLEMENTAL TABLE 1. Treatment indications of short-term FQ or non-FQ use in patients who received short-term (< 7 days) FQ or non-FQ antibiotics

	FQ use (n=23)		Non-FQ use (n=30)	
	No. of patients	**No. of dead patients**	**No. of patients**	**No. of dead patients**
Early switch to the first line anti-TB drugs	8	0	11	0
Empirical therapy for other infection	6	1	4	0
Rapid fatal due to progression of pneumonia during empirical antibiotics	4	4	1	1
Wrong prescription in emergency department	3	0	2	0
Hopeless discharge	1	1	0	0
Perioperative antibiotics	1[a]	0	12[b]	0
Total	30	1	30	1

[a] Perioperative prophylaxis for cardiac window operation.

[b] The 12 patients who received short-term non-FQ for perioperative antibiotics underwent the scheduled cancer surgery (lung cancer (n=3), hepatocellular carcinoma (n=2), urogenital cancer (n=1)) and the scheduled procedure (urogenital procedure (n=3), dental problem (n=1), CNS problem (n=1), lymph node excision (n=1)).

SUPPLEMENTAL TABLE 2. Demographics, clinical characteristics, treatments, and outcomes of the 57 immunocompromised patients who did not received empirical anti-TB treatment (missed TB group)

NOTE. Data are no. (%) of patients unless indicated otherwise. AG, aminoglycoside; FQ, fluoroquinolone; HIV, human immunodeficiency virus; IQR, interquartile range; SD, standard deviation; TB, tuberculosis.

[a] 10 (67%) were exposed to levofloxacin alone. In addition, 3 (20%) were exposed to ciprofloxacin and levofloxacin, and 2 (13%) were exposed to levofloxacin and moxifloxacin.

[b] The comparator included the short-term FQ group (n=6), non-FQ group (n=15), and no antibiotics (n=21).

[c] 6 patients (2 in the long-term FQ group and 4 in the comparator) had extrapulmonary manifestations of TB only.

[d] 15 patients (3 in the long-term FQ group and 12 in the comparator) died before the availability of a positive mycobacterial culture, and 11 patients (4 in the long-term FQ group and 7 in the comparator) defaulted from anti-TB treatment.

[e] Defined as treatment interruption for any reason.

[f] No patients received AG for more than 7 days prior to TB diagnosis.

[g] 6 (14%) patients in the comparator received FQ (< 7 days) prior to anti-TB treatment.
