

Supplemental Fig. S1.

B and T cell development and maturation in WT and *Neil1*^{-/-} mice. (A) FACS profiles of bone marrow cells. (B) FACS profiles of B220⁺ cells in the spleen. (C) FACS profiles of TCRβ⁺ cells in the spleen. (D) Class switch recombination. Spleen B cells were stimulated with 10 µg/ml of LPS plus 10 ng/ml of interleukin-4 and analyzed for IgG1 expression 3 days later by FACS. Representative results of three pairs of WT and *Neil1*^{-/-} mice are shown.

Supplemental Fig. S2.

Accumulation of Tg lesions in WT and *Neil1*^{-/-} B cells after immunization with the T-dependent antigen NP-CGG. WT and *Neil1*^{-/-} mice were immunized with NP-CGG. Two weeks later, spleen B cells were purified and stained for Tg and GL7 as described in Materials and methods. GL7 was used to mark GC B cells. Representative images of WT (left 2 panels) and *Neil1*^{-/-} (right 2 panels) B cells are shown.

Supplemental Fig. S3.

Mutation patterns in Ig genes (J_H4 intronic region) of WT and *Neil1*^{-/-} mice.
