**Table 1. Arctic Human Sample.** Sexual dimorphism values (male/female) and means by sex for Alaskan samples. Mean values that do not significantly differ between the living populations and the Point Hope sample (at the 0.05 level with Benjamini-Yekutieli adjustment for multiple comparisons) are indicated by ‘ns’. Within sample differences between male and female means indicated by ***bold and italicized*** values. Kotzebue incorporates individuals from Point Hope. Wainwright is within the Barrow collecting area and both are North of Point Hope. Nunatagmiut is inland from Barrow. Mackenzie, Coronation Gulf and Victoria Island are far east coastal areas. Stature in cm, all other measurements in mm.

**Table 7. Kenyan Vervets Significant Differences by Sex Across Groups** arranged from most to least differences. Twelve variables were measured for each population. Variable abbreviations are: Wt = weight, BL = Body Length, BB = Body Breadth, CG = Chest girth, Hand = hand length, UA = Upper Arm length, LA = forearm length, Head = circumference, UL = Thigh length, LL = Lower leg length, Foot and Tail lengths. Data source as per text. Bold abbreviations are those in which significant differences in CVs between groups in the mixed-sex sample would have suggested the difference in group means based on sex-matched samples.
