## **Supplementary figure legend**

**Supplemental Figure S1. HCO<sub>3</sub><sup>-</sup> ion is required for embryo cleavage.** **A,** Four-cell embryo formation after 12 hours of 2-cell embryo culture in TALP medium with varying concentrations of HCO<sub>3</sub><sup>-</sup> and constant Cl<sup>-</sup> concentration (115 mM) (50 mM: 27/35 embryos; 25 mM: 35/40 embryos; 12.5 mM: 15/34 embryos; 0 mM: 3/34). Scale bar: 100  $\mu$ m. **B,** Summary of the results from C. ns indicates  $P > 0.05$ , \*\*\* indicates  $P < 0.001$  (by one-way ANOVA,  $n = 4$ ).

**Supplemental Figure S2. Expression of SLC channels mRNA in 2-cell to 8-cell embryos.** Quantitative real-time PCR results showing the mRNA expression level of SLC channel family members. The expression was normalized to rRNA expression in 2-cell to 8-cell embryos.

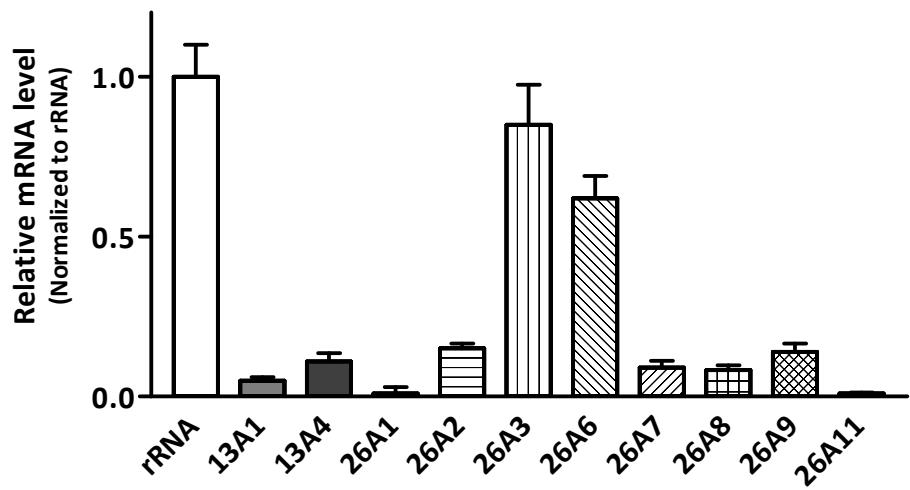

**Supplemental Figure S3. Dose-dependent effects of niflumate and DIDS on inhibiting embryo cleavage.** Embryos were treated with indicated concentration of niflumate or DIDS in complete TALP. a, Compared with DIDS control,  $P < 0.05-0.01$ ; b, compared with niflumate control,  $P < 0.05-0.001$ ; c, compared with corresponding DIDS treatment,  $P < 0.05-0.01$ . ( $n = 4$ ).

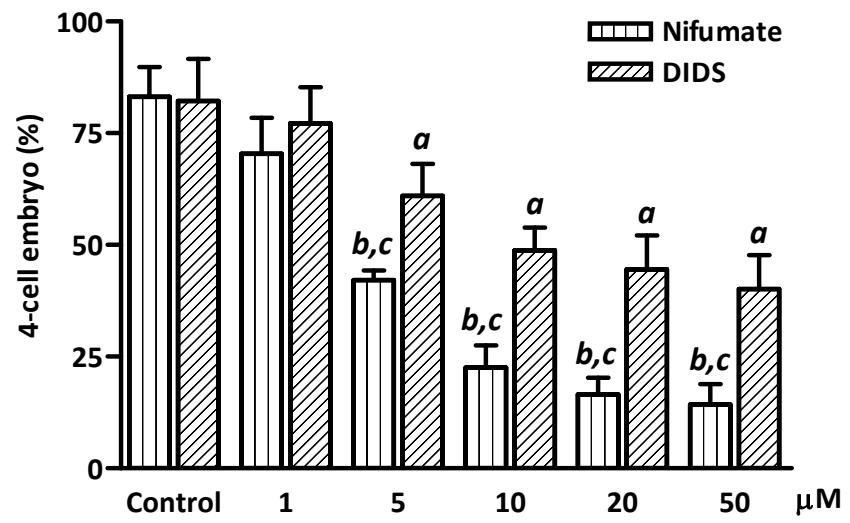

**Supplemental Table 1. List of primers used.**

**A****B**

Supplemental Figure S1

### SLC mRNA expression in embryo (2-8-cell)
