

Bakuchiol suppresses proliferation of skin cancer cells by directly targeting Hck, Blk, and p38 MAP kinase

Supplementary Materials

Supplementary Figure S1: Effects of bakuchiol on signal transduction in A431 cells. A431 cells were treated with bakuchiol (0, 2.5, 5, or 10 μM) for 48 h and harvested. Immunoblotting was conducted using specific antibodies.

Supplementary Figure S2: Corresponds to quantitative data shown in Figure 6A and 6B.
