

Supplementary figures

Supplementary figure 1. Sucrose depletion in hydroponic medium between weeks 7 and 9 for the stationary control and the shaking group. Values are for pooled samples from 3 plants.

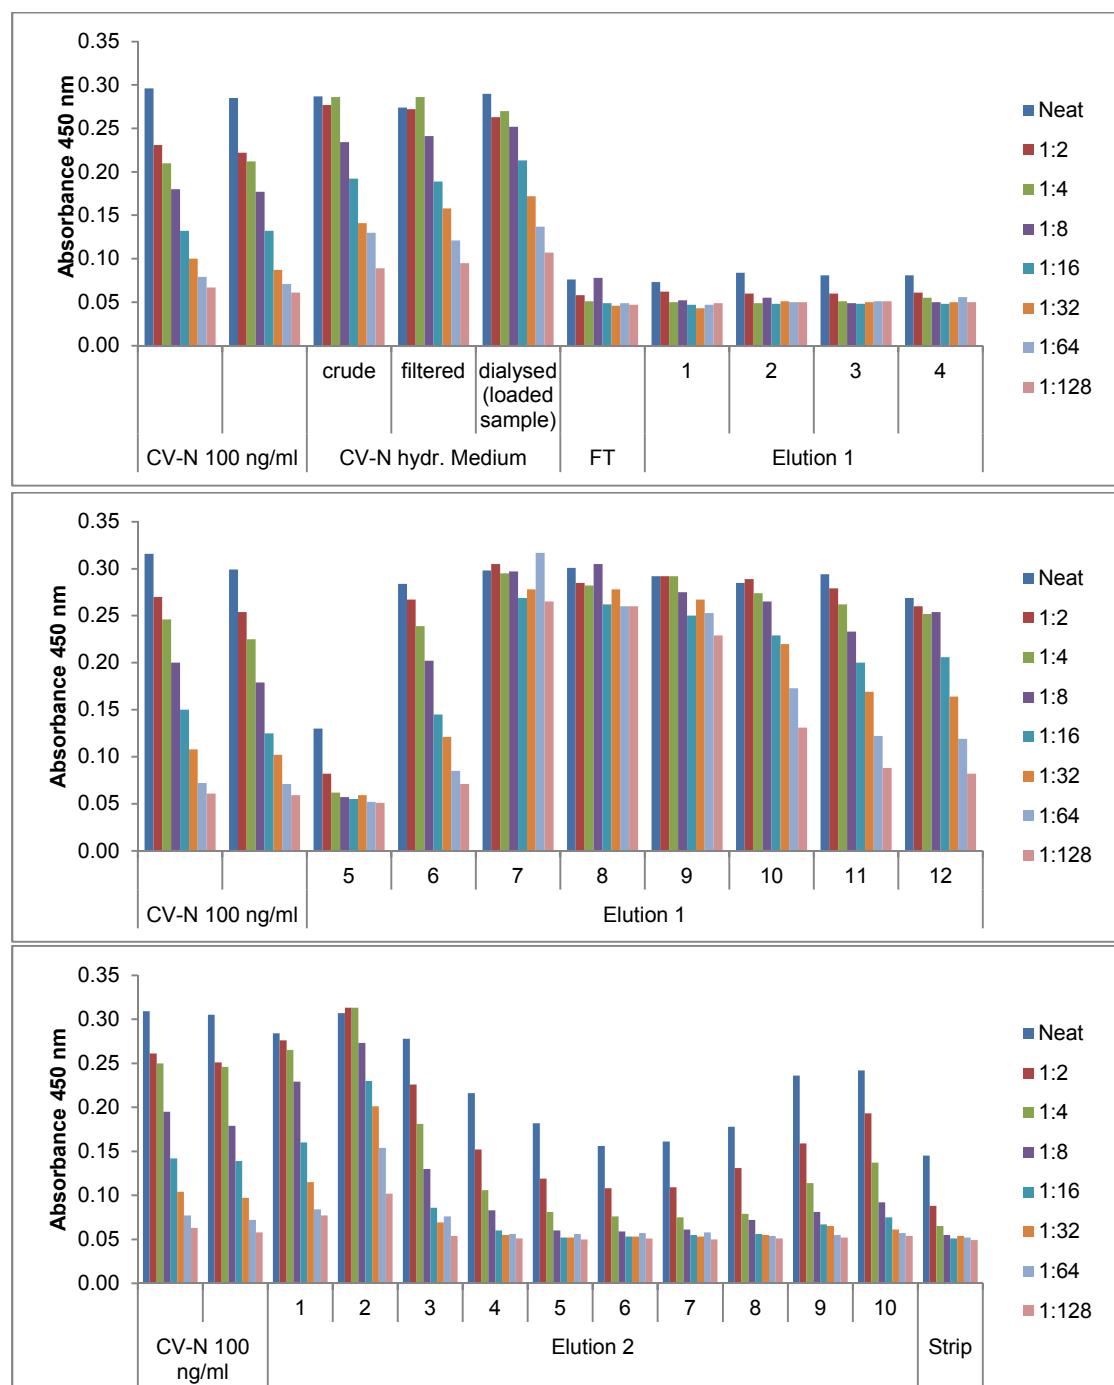

Methodology

Sucrose concentration was measured with a Sucrose Assay Kit (Sigma-Aldrich, Poole, UK - product code SCA-20). The assay was performed according to the manufacturer's instructions.

Supplementary figure 2. gp120 binding ELISA with eluted samples from first IEX run. 50 ml of dialyzed medium were loaded onto an 1 ml HiTrap Q HP column. After washing, elution was performed in three steps: 1 – 0 to 200 mM NaCl in buffer A (10 ml); 2 – gradient from 200mM to 1M NaCl in buffer A (30 ml, 1 ml fractions); 3 – 1M NaCl (10 ml, 1 ml fractions). Loaded samples and Flow-

through samples were diluted 10 times and elution fraction 100 times prior to loading (neat).

Supplementary figure 3. gp120 binding ELISA with eluted samples from second IEX run. 50 ml of dialysed medium were loaded onto a 1 ml HiTrap Q HP column. After washing, elution was performed in three steps: 1 – gradient from 0 to 200 mM NaCl in buffer A (12 ml, 1 ml fractions); 2 – gradient from 200mM to 1M NaCl in buffer A (10 ml, 1 ml fractions); Strip – 1M NaCl (10 ml). Hydroponic medium samples and FT were diluted 10 times and elution fractions were diluted 100 times prior to loading (neat).

Supplementary Table 1. Proteins identified in 'CV-N with NAA in MS' sample. Recombinant protein is highlighted in red, hits highlighted in blue indicate proteins differing from supplementary table 2.
