

Figure S2. Network of synaptic mRNAs with lncRNAs identified from ASD: Synaptic mRNA (red ball) could be associated with either a single lncRNA (green ball), such as SYT3, or with numerous lncRNAs, such as SYNGR4 and SYNPO. Some lncRNA(s) may associate with two (or more) mRNAs. Knowing the relationship between mRNA and its associated lncRNA(s) may help in interpretation of possible regulatory outcome(s).
