

Barbosa et al (2016) The ceramide-activated protein phosphatase Sit4p controls lifespan, mitochondrial function and cell cycle progression by regulating hexokinase 2 phosphorylation. *Cell Cycle*

**Supplemental Table S1.** Identification of proteins differentially expressed in *sit4Δ* cells by MALDI-MS/MS.

Proteins were isolated from *S. cerevisiae* BY4741 and *sit4Δ* cells grown to exponential phase in YPD medium and separated by two-dimensional electrophoresis. Proteins were visualized by silver staining. Gel was scanned using a densitometer, images were converted to TIFF format and PDQuest v7.3 software was used for quantification of spot intensities. Proteins were identified by MALDI-TOF/TOF.

Gel spot	Accession no.	Protein name	Protein Function	MW	pI	Fold Change	S.D.
