5 **Supplemental Figure S1.** Differential expression of *AtPIP* Genes in
6 DC3000-inoculated plants. Gene expression in leaves was analyzed by real-time
7 RT-PCR and expression level of each gene was shown as the ratio (mean ± SEM; $n = 3$)
8 of transcript quantities between inoculated and mock-inoculated plants.

11 **Supplemental Figure S2.** An insertional mutation of *AtPIP1;4*. A, A map showing the
12 pDAP101 vector that contains the selective marker gene *Basta^r* (bottom label) and
13 location of a T-DNA insertion in *atpip1;4* mutant. Seed stock number is in parenthesis.
14 Colored bars indicate the gene DNA components, including untranslated region (UTR).
15 B, Identification of T-DNA-indexed *AtPIP1;4* mutation. The genomic DNA was
16 analyzed by PCR using primers specific to gene sequences indicated on left.

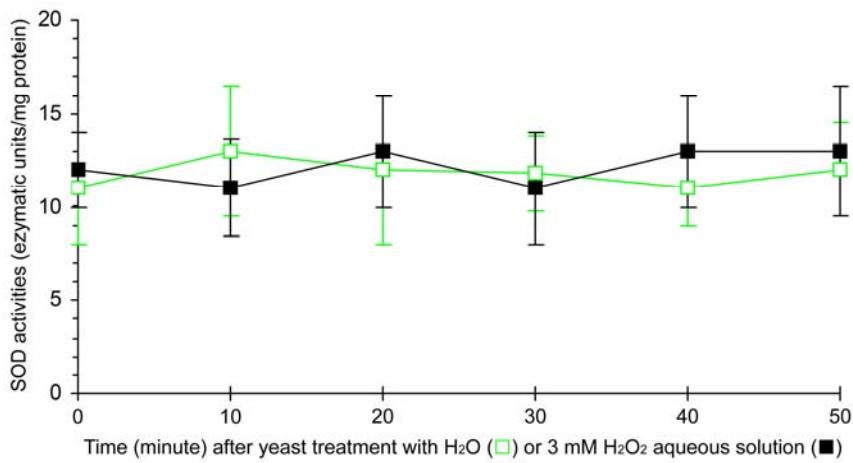

17

18

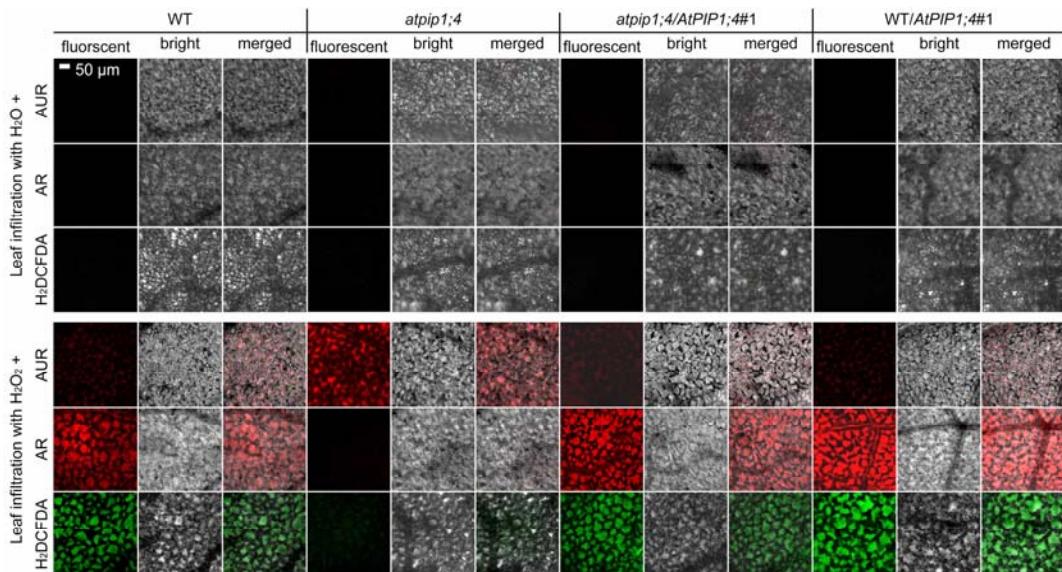

19 **Supplemental Figure S3.** Yeast colonies grown with H₂O₂ supply at the indicated
20 concentrations. Colonies were photographed on 3 days after incubation on medium.

21

22

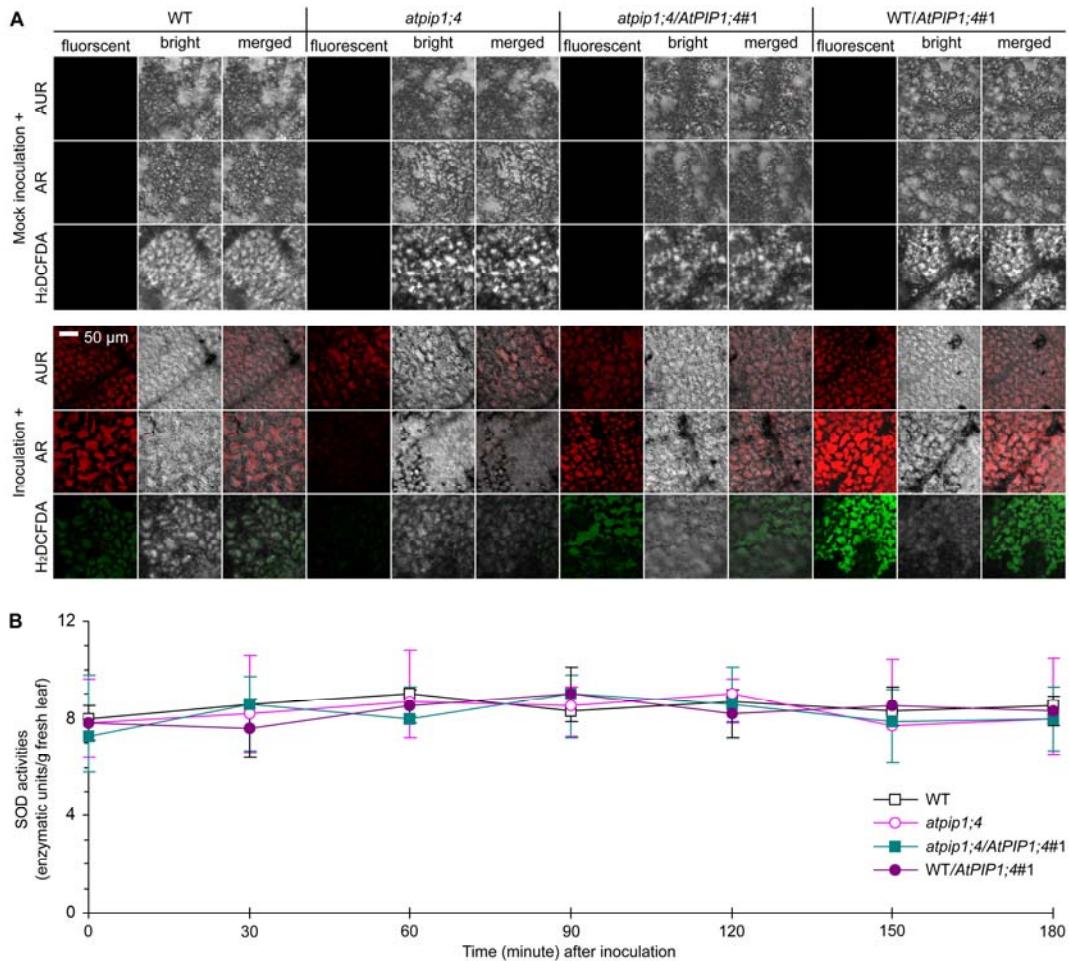

23 **Supplemental Figure S4.** Yeast SOD activity measurements. Data shown are means ±
24 SEMs ($n = 3$).
25

26

27 **Supplemental Figure S5.** Imaging of apoplastic H₂O and cytoplasmic H₂O₂ or ROS in
28 leaves of plants treated with H₂O₂ or H₂O. Leaves were observed by confocal
29 microscopy on 45 minutes after infiltration treatment with agents shown on left. AUR
30 and AR visualized apoplastic and cytoplasmic H₂O₂, respectively, and H₂DCFDA
31 detected cytoplasmic ROS.

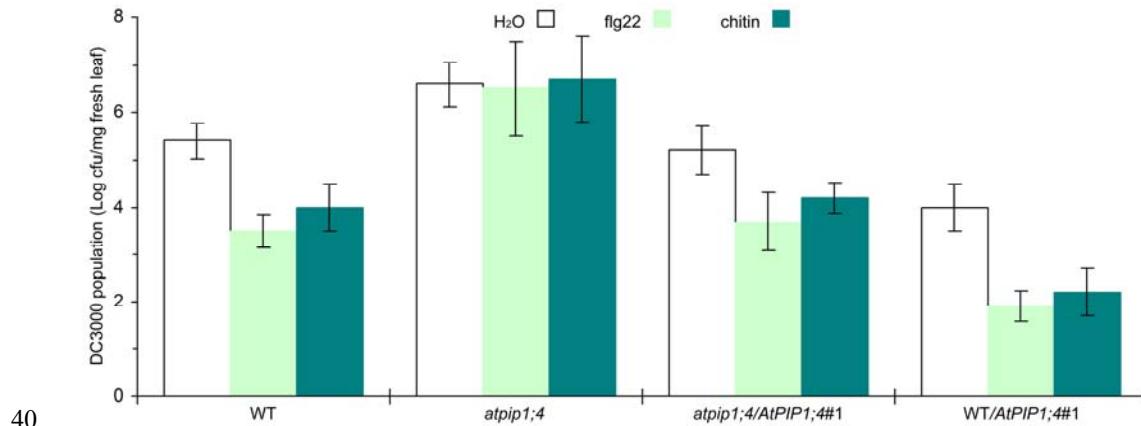

32

33

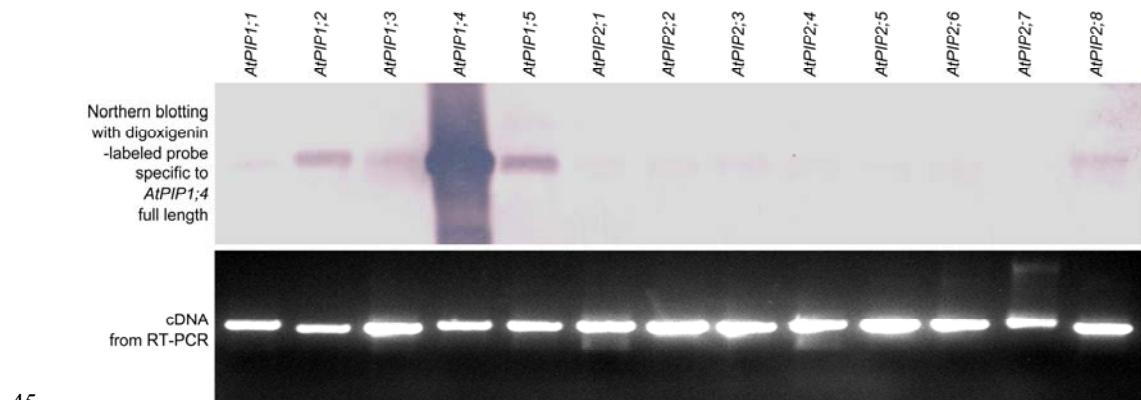

34 **Supplemental Figure S6.** H₂O₂ or ROS visualization and SOD activities in leaves of
 35 inoculated and mock-inoculated plants. A, Leaf imaging by confocal microscopy at one
 36 hour after inoculation or mock inoculation. AUR and AR visualized apoplastic and
 37 cytoplasmic H₂O₂, respectively, and H₂DCFDA detected cytoplasmic ROS.
 38 B, SOD activity quantification (means ± SEMs; *n* = 3).

39

40
41 **Supplemental Figure S7.** The effects of PAMPs on DC3000 population growth in
42 plant leaves. Data shown are means \pm SEMs ($n = 3$) of bacterial population in
43 inoculated leaves 3 dpi (5 days after treatment with the indicated agents).

44

45

46 **Supplemental Figure S8.** Northern blotting analysis with *AtPIP1;4* probe hybridized to
47 RT-PCR products of *AtPIPs*. RT-PCR was performed with specific primers and total
48 RNA isolated from leaves of the WT plant. RNA was used at 1 μ g in a 25 μ l reaction
49 solution to produce cDNA; uniformly 5 μ g cDNA was used in electrophoresis for every
50 *AtPIP* gene.

51

52 **Supplemental Table S1.** Relative levels of *MPK6* expression in leaves

Treatment group	Plant genotype			
	WT	<i>atPIP1;4</i>	<i>atPIP1;4/AtPIP1;4#1</i>	WT/ <i>AtPIP1;4#1</i>
H ₂ O (control)	1 ± 0.017	0.86±0.096	1.17 ± 0.414	1.14 ± 0.092
Flg22	0.85 ± 0.159	0.66 ± 0.07	0.99 ± 0.248	1.03 ± 0.037
Chitin	0.83 ± 0.162	0.78 ± 0.19	1.05 ± 0.414	1.03 ± 0.108

53 Note: data are *MPK6* transcript quantity ratios to *ACTIN2*.
