

**Supplemental Figure 7**

**Supplemental Fig. 7. Time-dependent changes in H2B variants as cells undergo iAs-mediated EMT.** Measured relative abundances of the various H2B variants at Day 4, 8 and 16 of iAs treatment. The histone variants that were highly changed at all three time points are shaded with a blue box. Error bars represent S.D. from three biological replicates, each containing three technical replicates. Asterisks denote p-values < 0.05 as determined by Student T-test.
