Table e-1. Multivariable results for association between research participation and outcomes of acute hospital care including those who were palliated during the admission

Model	Outcome	Excluding stroke unit care from model		
		aOR	95% CI	p value
1	Died in hospital	0.40	0.18-0.84	0.02
2	Independence on discharge^	0.97	0.70-1.33	0.84
3	Discharged home*	0.81	0.60-1.10	0.17
4	Discharged to inpatient rehabilitation*	1.47	1.12-1.95	0.006
5	Discharged to aged care facility*	0.92	0.51-1.65	0.77

aOR- adjusted odds ratio; CI- confidence interval; ^mRS 0-2; *Each discharge destination tested against all other destinations (excluding death); Independent variables in model included: hospital location, hospital stroke admission numbers, age, sex, history of hypertension and hypercholesterolaemia, independence prior to stroke, living at home prior to stroke, ischaemic stroke, arm weakness, speech deficit, inability to walk on admission, incontinence within 72 hours
