

Enrichment Profile of Type I interferon signalling pathway-related genes

Supplementary Figure S2. GO Term Enrichment profile of the category ‘Type I interferon signalling pathway-related genes’ in primary and commercial cell lines and full statistical details of datasets used as reference. In contrast to primary cell lines, commercial cell lines MSTO-211H and NCI-H2052 display no enrichment for the type I interferon signalling pathway, *** indicates $p < 0.001$, ** $p < 0.01$, * $p < 0.05$.
