

S2 Fig. related to Fig. 2.

S2 Fig. HS-72 reduces the percent of DENV infected Huh7 cells.

The Hsp70i inhibitor, HS-72, yields a dose dependent reduction in DENV infection. Huh7 cells were treated and processed as described in Fig. 2. DENV infection results in 58% of cells infected, with HS-72 reducing infection to 42% of cells infected at 50 nmol/ml, and 39% at 100 nmol/ml. Mean \pm SEM. *, $p < 0.05$ compared to control.
