

Supplemental materials

Table S1.

Means, standard deviations, and intercorrelations among RTs across conditions in the Affective Posner and Dot-Probe tasks.

	Variable	Mean	SD	1	2	3	4	5
1	Angry Valid	448.34	70.54	-				
2	Angry Invalid	455.04	66.31	.868	-			
3	Neutral Valid	443.93	65.45	.932	.878	-		
4	Neutral Invalid	453.45	68.56	.879	.934	.861	-	
5	Congruent	590.74	75.87	.503	.447	.454	.433	-
6	Incongruent	591.23	76.26	.517	.472	.467	.467	.978

Note: Means are in milliseconds; 1-4 indicate Affective Posner variables and 5-6 indicate Dot-Probe variables. All correlations are significant ($p < .01$).
