Content:

Figure S1. Ventral view of a *Macrodinychus multispinosus* adult female.

Figure S2. Resilient exuviae of the previous stages of a mite male.

Figure S3. Host worker carrying a parasitized worker pupa.

Figure S4. Superparasitism by *Macrodinychus multispinosus*.

Table S1. Host targets of the different developmental stages of *Macrodinychus multispinosus*.

Figure S1. Ventral view of a *Macrodinychus multispinosus* adult female. Scanning electron micrograph. Note that legs may be withdrawn into special depressions (pedofossae). Photo: G. Nieto.

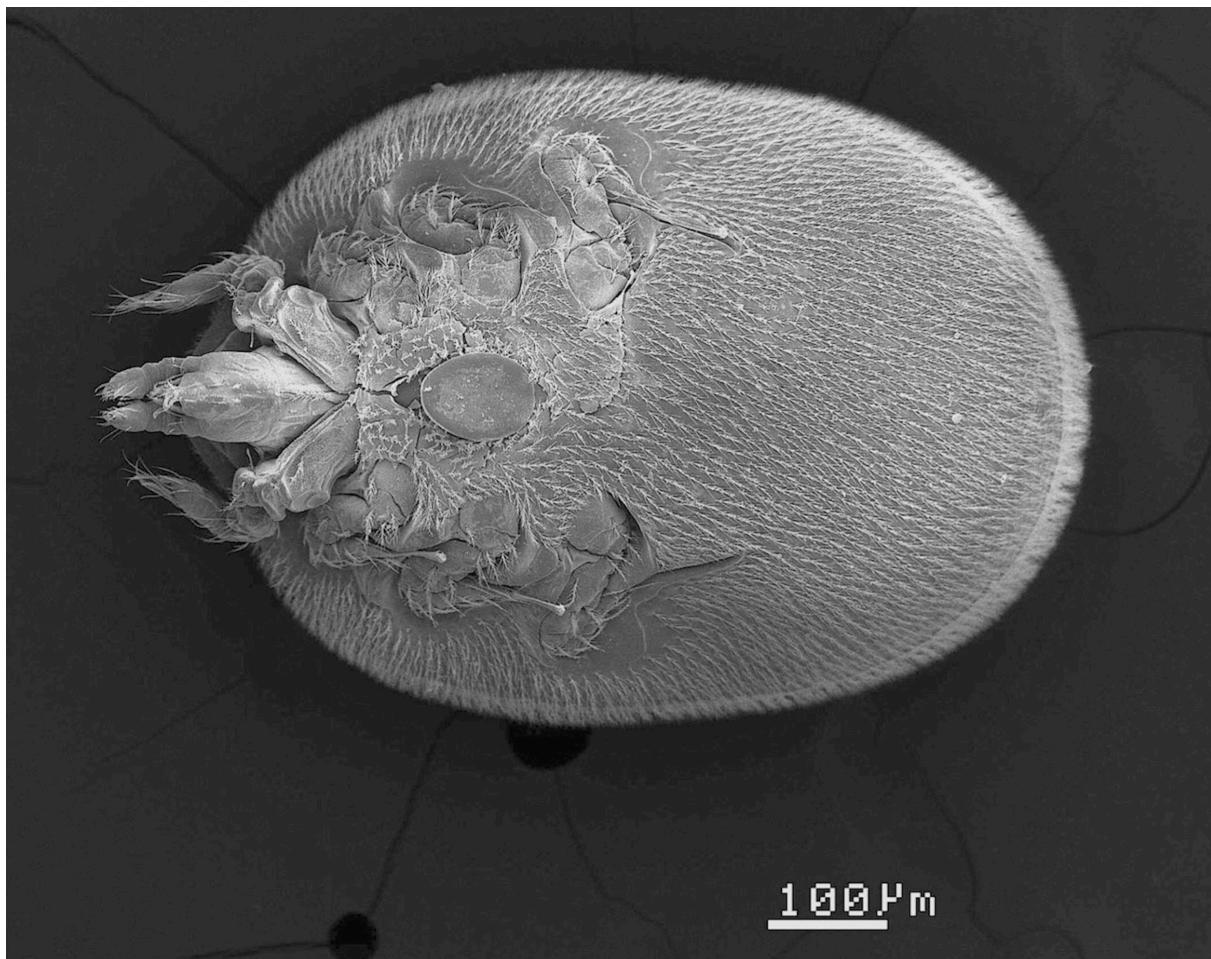

Figure S2. Resilient exuviae of the previous stages of a mite male. Slide-mounted exuviae of the immature stages of *Macrodinychus multispinosus*: cuticle of the larva (a) still preserved on the cuticle of the deutonymph (b). Photo: H. Klompen.

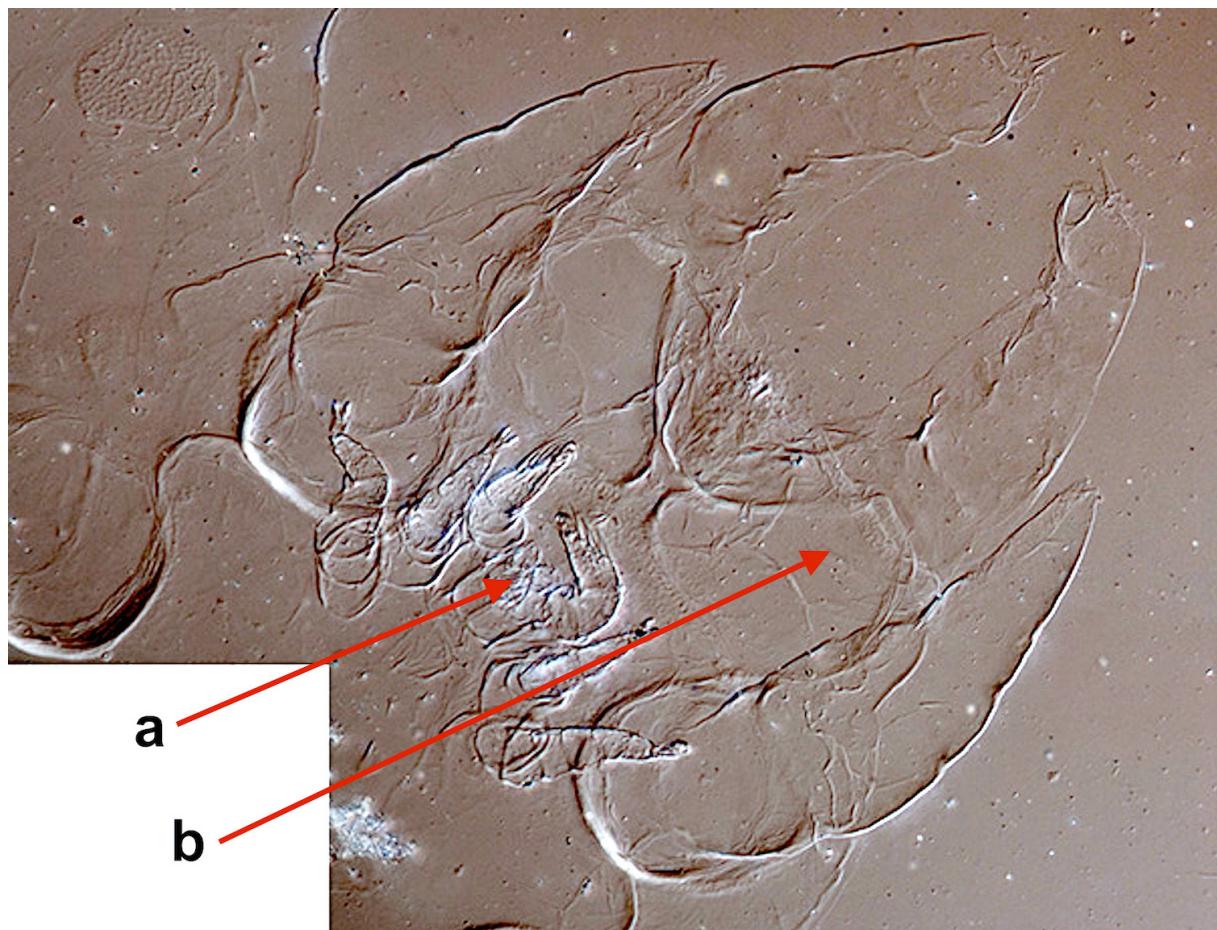

Figure S3. Host worker carrying a parasitized worker pupa. Alcohol preserved *Paratrechina longicornis* worker carrying in its mandibles a worker pupa parasitized by a teneral adult mite. Photo: G. Pérez-Lachaud.

Figure S4. Superparasitism by *Macrodinychus multispinosus*. Rare example of a *Paratrechina longicornis* worker pupa parasitized by two deutonymphs (see arrows) of *M. multispinosus*. Photo: G. Pérez-Lachaud.

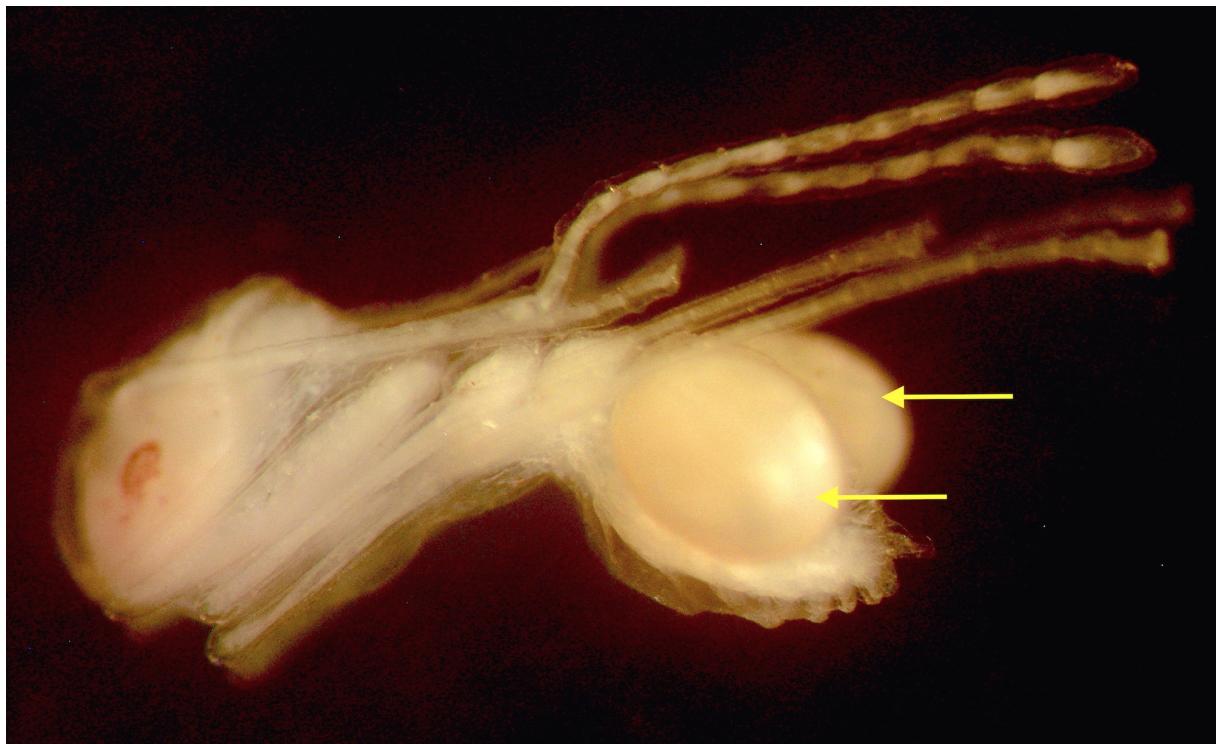

Table S1. Host targets of the different developmental stages of *Macrodinychus multispinosus*. Developmental stages and host caste targeted in parasitized colony samples of *Paratrechina longicornis* in three localities of southern Quintana Roo, Mexico.

Locality	Date	Parasitized worker pupae		Parasitized male pupae		No. of host pupae	No. of parasitized host pupae
		Larvae	Protonymphs	Deutonymphs + adults	Deutonymphs + adults
