

Figure S1. Induction of the *Xf*DSF biosensor by either 2 or 10 μ l of a purified fraction of a DSF-containing extract of *P. agglomerans* 299R expressing *X. fastidiosa* RpfF (fractions named based on their retention times in minutes in HPLC [HPLC RT]). White bars represent induction of the sensor by 10 μ M *Xf*DSF2 or MeOH only.
